

Fund Overview

The PMV Adaptive Risk Parity ETF (the “Fund”) is an actively managed fund that seeks to generate capital appreciation, with lower volatility and reduced correlation to the overall equity market, by taking advantage of broad asset class trends throughout the market cycle. The Fund was designed to provide exposure to asset classes not typically found in traditional stock and bond portfolios, diversifying the sources of returns to provide upside potential in various macroeconomic environments.

Asset Class Momentum Trends

Methodology

Investment decision are made using a systematic process that identifies mid- to long-term trends and allocates to the assets showing the highest relative momentum. Exposures are achieved through ETFs.

1. **Calculate** the total return of each asset class over multiple periods
2. **Score** each asset class based on its momentum within every period, based on its total return
3. **Allocate** weightings to the four assets with the highest score within each period by creating a portfolio that targets the greatest risk-adjusted return
4. **Repeat** the process and rebalance monthly

Carefully consider the Fund's investment objectives, risk factors, charges, and expenses before investing. This and additional information can be found in the Fund's prospectus, which may be obtained by visiting pmvcapital.com/arp. Please read the prospectus carefully before investing.

PMV Capital Advisers, LLC serves as the investment adviser of the Fund. Vident Asset Management serves as a sub-adviser to the Fund. The Fund is distributed by SEI Investments Distribution Co. (SIDCO), which is not affiliated with PMV Capital Advisers, LLC, Vident Asset Management or any of their affiliates.

S&P 500 INDEX - The S&P 500 Index is a market-capitalization weighted index containing the 500 most widely held companies (400 industrial, 20 transportation, 40 utility and 40 financial companies) chosen with respect to market size, liquidity, and industry. The index is calculated on a total return basis with dividends reinvested.

There is no guarantee the fund will achieve its objective. Diversification does not ensure a profit or guarantee against a loss.

An investment in the fund involves risk, including possible loss of principal. In addition to the normal risks associated with investing, the Fund is subject to Momentum Risk. Therefore, the value of the Fund may decline if, among other reasons, momentum trends believed to be beneficial to the Fund stop, reverse, otherwise behave differently than predicted, or the securities selected for inclusion in the Fund's portfolio do not perform as anticipated. The Fund may be more heavily invested in particular asset classes and may be especially sensitive to factors and economic risks that specifically affect those asset classes. An actively-managed fund is subject to the risk that its investment adviser will select investments or allocate assets in a manner that could cause the fund to underperform or otherwise not meet its investment objective.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The **market price** returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. **NAVs** are calculated using prices as of 4:00 PM Eastern Time.
