

---

**EUWENA recognised the urgent need to promote the greater uptake of 3GPP-based private mobile broadband networks and to speed up the regulation processes for the availability and harmonisation of sufficient frequency spectrum dedicated for today's industry users.**

EUWENA is aware of the difficulty for private individuals to understand the complex environment around private local use spectrum availability in their country. Harder still to fathom out are the licencing conditions, pricing schemes and the complicated application process. Therefore, EUWENA has tasked itself to simplify this process by compiling a spectrum information observatory. This observatory will be updated annually with a concise overview of the available European frequency spectrums, for private corporate and industry individuals who wish to implement their own private local mobile network.

This information is presented per country across three bands:

#### **LOW < 1 GHz**

Typically used in the utilities industry for IoT services that require very wide penetrative coverage with low infrequent data rates, with a range of bandwidths from 1.3 MHz typically up to 10 MHz.

#### **Medium 1 GHz to 6 GHz**

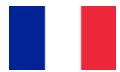

Bands typically used by public mobile operators, from data rates with 25 Mbps\* and wide coverage, to very local or confined, short-range coverage with high data rates over 300 Mbps\*. Bandwidths range from 5 MHz to 100 MHz (\*SiSo).

#### **HIGH > 6 GHz**

High frequency bands with very high data rates up to 1 Gbps, Typical applications are very local short range such as point to point links.

For each country, we provide the reader with high-level summary overview, spectrum availability, bandwidths, pricing schemes, applications, and other useful links. In addition, we will publish annually this information and continue to include additional countries both European and international. To keep you updated, we will post news of ongoing or planned consultations relating to licencing changes or new spectrum availability for private users.

Furthermore, EUWENA will be available to support your outstanding questions related to the spectrum policies.

**EUWENA a reconnu l'urgence de promouvoir l'adoption à plus grande échelle des réseaux mobiles privés à large bande basés sur le 3GPP et d'accélérer les processus de réglementation portant sur la disponibilité et l'harmonisation d'un spectre de fréquences suffisant pour les utilisateurs industriels d'aujourd'hui.**

EUWENA est consciente de la difficulté pour les particuliers de comprendre l'environnement complexe encadrant la disponibilité du spectre pour une utilisation locale privée dans leur pays. Les conditions d'octroi des licences, les systèmes de tarification et la complexité de la procédure de demande sont encore plus difficiles à appréhender. EUWENA s'est donc donnée pour mission de simplifier ce processus en compilant un observatoire des informations sur les spectres. Cet observatoire sera mis à jour annuellement et offrira un aperçu concis des bandes de fréquence disponibles à l'échelle européenne, à l'intention des entreprises et des particuliers qui souhaitent mettre en place leur propre réseau mobile privé.

Ces informations sont présentées par pays pour les trois bandes de fréquences :

#### **Basses fréquences < 1 GHz**

Adaptées aux usages d'internet des objets (IoT) qui requièrent une couverture très large ainsi que des débits faibles ou moyens pour une canalisation s'étendant de 1,5 à 10 MHz.

#### **Moyennes fréquences 1 GHz à 6 GHz**

Bandes typiquement utilisées par les opérateurs mobiles publics, allant de débits de données de 25 Mbps\* avec des couvertures étendues à des couvertures très locales ou confinées à courte portée avec des débits de données élevés et supérieurs à 300 Mbps\*. Les canalisations s'étendent de 5 MHz à 100 MHz (\*SiSo).

#### **Hautes fréquences > 6 GHz**

Bandes de fréquences élevées avec des débits de données très élevés; les applications sont très locales et à courte portée, telles que des liaisons point à point.

Pour chaque pays, nous fournissons au lecteur un résumé de haut niveau, la disponibilité des spectres, les largeurs de bande, les systèmes de calcul de redevances, les applications et d'autres liens utiles. En outre, nous publierons ces informations annuellement et continuerons d'ajouter des pays supplémentaires, tant européens qu'internationaux. Afin de vous tenir informés, nous publierons des informations sur les consultations en cours ou prévues concernant des changements de licence ou de nouvelles disponibilités de spectre pour les utilisateurs privés.

De plus, EUWENA sera disponible pour répondre à vos questions portant sur les politiques relatives au spectre.

---

**Für EUWENA ist es dringend notwendig, die stärkere Verbreitung privater mobiler 3GPP-Breitbandnetze zu fördern und die Regulierungsprozesse für die Verfügbarkeit und Harmonisierung ausreichender Frequenzspektren für die heutigen industriellen Nutzer zu beschleunigen.**

EUWENA ist sich bewusst, dass es für Privatpersonen schwierig ist, das komplexe Thema der Verfügbarkeit von Frequenzen für die private lokale Nutzung in ihrem Land zu verstehen. Hinzu kommen die Lizenzbedingungen, die Preisgestaltung und das komplizierte Antragsverfahren, die noch schwieriger zu verstehen sind. Aus diesem Grund möchte EUWENA diesen Prozess vereinfachen und wird daher eine Beobachtungsstelle für Frequenzinformationen einrichten. Diese Beobachtungsstelle wird jährlich aktualisiert und wird Privatunternehmen und Industriekunden, die ihr eigenes privates lokales Mobilfunknetz einrichten möchten, einen präzisen Überblick über die verfügbaren europäischen Frequenzspektren geben.

Diese Informationen werden pro Land und jeweils drei Bänder dargestellt:

#### **Niedrige Frequenzen: < 1 GHz**

Wird typischerweise in der Versorgungswirtschaft mit SMART-Zählern verwendet, die eine sehr breite Abdeckung mit niedrigen, unregelmäßigen Datenübertragungsraten erfordern, mit einer Bandbreite von 1,3 MHz bis typischerweise 10 MHz.

#### **Mittlere Frequenzen: 1 GHz bis 6 GHz**

Normalerweise von öffentlichen Mobilfunkbetreibern genutzte Bänder, für Datenübertragungsraten ab 25 Mbps\* und breiter Abdeckung bis hin zu sehr lokaler oder eingeschränkter Kurzstreckenabdeckung mit hohen Datenübertragungsraten von 300 Mbps\* oder höher. Die Bandbreiten reichen von 5 MHz bis 100 MHz (\*SiSo).

#### **Hohe Frequenzen: > 6 GHz**

Hochfrequenzbänder mit sehr hohen Datenübertragungsraten, Anwendungen mit sehr kurzer Reichweite wie die Punkt-zu-Punkt-Verbindungen.

Für jedes Land erhält der Leser eine hochwertige Zusammenfassung über die Verfügbarkeit von Frequenzen, Bandbreiten, Preissystemen, Anwendungen und andere nützliche Links. Darüber hinaus werden wir diese Informationen jährlich veröffentlichen und weiterhin europäische und internationale Länder hinzufügen. Um Sie auf dem Laufenden zu halten, werden wir Neuigkeiten über aktuelle oder geplante Konsultationen zu Änderungen bei der Lizenzvergabe oder der Verfügbarkeit neuer Frequenzen für private Nutzer veröffentlichen.

Darüber hinaus beantwortet EUWENA Ihnen gerne Ihre offenen Fragen in Bezug auf die Frequenzpolitik.

## INFORMATION AND TERMINOLOGY

<b>2G/3G</b>	A digital mobile communications standard allowing for voice calls and limited data transmission. "3G handles both voice and data much more efficiently than 2G"
<b>4G</b>	4 <sup>th</sup> Generation of 3GPP digital mobile communications standard replacing 3G, allowing wireless internet access at a much higher speed
<b>5G</b>	5 <sup>th</sup> generation 3GPP digital mobile network replacing 4G. 5G is important as it is changing the way the world connects and communicates. Enabling a new kind of network that is designed to connect virtually everyone and everything together including machines, objects, and devices.
<b>LTE</b>	Long-Term Evolution is a standard for wireless broadband communication for mobile devices and data terminals
<b>NR</b>	5G NR is a new radio access technology developed by 3GPP for the 5G mobile network. It was designed to be the global standard for the air interface of 5G networks
<b>3GPP</b>	3 <sup>rd</sup> Generation Partnership Project (3GPP) unites seven telecommunications standard development organizations (ARIB, ATIS, CCSA, ETSI, TSDSI, TTA, TTC), known as "Organizational Partners" and provides their members with a stable environment to produce the Reports and Specifications that define 3GPP technologies
<b>FREE SPECTRUM</b>	Spectrum which can be utilised by a user, without the need to obtain specific licence
<b>PMN</b>	A private mobile radio network also called "PMN" (private mobile network) is an essential means of communication that can be dedicated to users with sensitive uses that require safety, security and reliability
<b>QoS</b>	Quality of service (QoS) is the description or measurement of the overall performance of a service or network
<b>MNO</b>	Mobile Network Operator
<b>TDD</b>	Time Division Duplex is a technique where the transmitter and receiver operate on the same frequency band but transmit and receive at different times
<b>FDD</b>	Frequency Division Duplex is a technique where the transmitter and receiver operate at different carrier frequencies
<b>BANDWIDTH</b>	A range of frequencies (hertz) within a given band, in particular that are used for transmitting a signal
<b>BAND 28</b>	700 MHz FDD: 703 – 748, Downlink: 758 – 803 (MHz)
<b>BAND 38</b>	2600 MHz TDD 2570 – 2620 (MHz)
<b>BAND 42</b>	3700 MHz TDD: 3400 – 3600 (MHz)
<b>BAND 43</b>	3700 MHz TDD: 3600 – 3800 (MHz)
<b>MHZ</b>	Megahertz. A unit of frequency in hertz x 1 million
<b>GHZ</b>	Gigahertz. A unit of frequency in hertz x 1 billion

## INFORMATION ON EUROPEAN LICENCED FREQUENCY SPECTRUM FOR PRIVATE WIRELESS NETWORKS

SUMMARY COMMENTS	<p><b>Current Information relating to Broadband Private Wireless Network licence for LTE/4G or 5G Broadband technology</b></p> <p><b>Low Band &lt; 1GHz</b>  <b>700 MHz:</b> Subject to the agreement of the Ministry of the Interior</p> <p><b>Medium Band 1 Ghz – 6 Ghz</b>  <b>26 GHz:</b> 5G Pilots counter open in 2018  <b>3.4-3.8 GHz:</b> Delegation requests must be made directly to the MNOs  <b>3.8-4.2 GHz:</b> Experimental frequency counter open in March 2022 for a period of three years</p> <p><b>High Band &gt; 6 GHz</b></p>		
DETAILS	LOW < 1 GHz	MEDIUM 1 GHz to 6 GHz	HIGH > 6 GHz

## INFORMATION ON EUROPEAN LICENCED FREQUENCY SPECTRUM FOR PRIVATE WIRELESS NETWORKS

<b>SUMMARY COMMENTS</b>	<p>Current Information relating to Broadband Private Wireless Network licence for LTE/4G or 5G Broadband technology.</p> <p><b>Low Band &lt; 1 Ghz &amp; Medium Band 1 Ghz – 6 Ghz</b>  <b>700 MHz, 900 MHz, 1400 MHz, 1800 MHz, 2100 MHz and 3600 MHz</b>            Public auctioned bands but not offered as "private radio communication licenses". See <a href="https://auction2022.be/sites/default/files/2022-01/Memorandum_EN.pdf">https://auction2022.be/sites/default/files/2022-01/Memorandum_EN.pdf</a>.            However, BIPT issues licenses (per radio site) for the use of private radio networks. With regards to potential use in PMNs, the following categories could be applicable:</p> <ul style="list-style-type: none"> <li>● <b>Category 1:</b> private mobile radio communications networks except the ones under Category 3. These include private mobile radio communications networks used for professional ends, for instance by taxi companies, factories, etc. (permanent licence) or at construction sites, events, etc. (temporary licence)</li> <li>● <b>Category 3:</b> mobile radio networks set up by governmental bodies, companies active in transportation by railways and public transport companies, hospitals and bodies for medical or social help for strictly humanitarian and non-profit purposes. This category aims at a similar use as category 1 licences, only the licence holder has a different capacity</li> <li>● <b>Category 9:</b> private radio networks or stations               <ul style="list-style-type: none"> <li>a) use for trials or testing – such as 5G test licenses</li> </ul> </li> </ul> <p>The above license categories and the framework to authorise them are not deemed practical or cost effective for a real PMN deployment. That's the reason why the Royal decree project below in 3.8-4.2 GHz specific for the PMN case is ongoing to set an appropriate framework.</p> <p><b>High Band &gt; 6 GHz</b>  <b>3.8-4.2 GHz</b> royal decree project ongoing <a href="https://www.bipt.be/operators/publication/consultation-at-the-request-of-the-minister-of-telecommunications-regarding-a-draft-bill-and-three-draft-royal-decrees-regarding-mobile-networks">https://www.bipt.be/operators/publication/consultation-at-the-request-of-the-minister-of-telecommunications-regarding-a-draft-bill-and-three-draft-royal-decrees-regarding-mobile-networks</a>.            Current proposal is:           <ul style="list-style-type: none"> <li>● Authorisation for private local networks with radio sites in an area of minimum 100 m radius</li> <li>● Maximum 40 MHz per authorised person/group in a particular location</li> </ul> </p>		
	<b>DETAILS</b>	<b>LOW &lt; 1 GHz</b>	<b>MEDIUM 1 Ghz to 6 GHz</b>
<b>AVAILABLE BANDS</b>	<b>700 MHz, 900 MHz</b> It is possible to apply for private radio communications licences in these bands with the BIPT. These are not the subject of public country auction rules.	<b>1800 MHz, 2100 MHz<sup>2</sup></b> It is possible to apply for private radio communications licences in these bands with the BIPT. These are not the subject of public country auction rules.  <b>3.8-4.2 GHz:</b> Maximum 40 MHz <sup>1</sup> per authorised person/group in a particular location a per ongoing draft Royal Decree project for PMN as per consultation of 29th January 2020	<b>26 GHz:</b> as a result of a consultation from 2019 the BIPT conclusion was that up to 6 blocks of 200 MHz could be dedicated and authorised for 5G without restrictions. Consultation ongoing, reactions closed 21-09-22 Test licenses are possible.
<b>BANDWIDTH</b>	Subject to request	<sup>2</sup> Subject to request, <sup>1</sup> 40 MHz	Subject to request

<b>KEY NOTES</b>			
<b>ONGOING WORKS</b>	The ministry of Economic Affairs and Climate is preparing the auction of the <b>3.5 GHz</b> band. Planned in Q1 of 2023. In the <b>3.5 GHz</b> band <b>100 MHz TDD</b> is expected to be assigned to local/private networks. In the <b>3.8-4.2 GHz</b> band a DSMS (dynamic spectrum management and sharing) pilot is planned to gain information how to protect the present users (Satcom operators) in this band. In the <b>400 MHz</b> band, the PAMR band, <b>1.5 MHz</b> will become available for critical communication nationwide usage.

## INFORMATION ON EUROPEAN LICENCED FREQUENCY SPECTRUM FOR PRIVATE WIRELESS NETWORKS

<b>SUMMARY COMMENTS</b>	<p>Currently in Ireland it is not possible to apply for a Broadband Private Wireless Network licence for LTE/4G or 5G Broadband technology.          Only narrowband PMR/DMR/ Trunked/Tetra radio licences can be applied for.</p> <p>The National regulator (<a href="http://www.comreg.ie">www.comreg.ie</a>) have recently consulted on their work plan for 2022 to 2024 and have concluded by making the following statements:</p> <p><b>BB-PPDR:</b>          "Having due regard to the advice of LS telcom, and cognisant that Ireland has yet to make decisions on its BB-PPDR deployment model and may therefore require spectrum for BB-PPDR, ComReg proposed to make spectrum available for BB-PPDR in the 400 MHz Band and in the 700 MHz Duplex Gap and 700 MHz Guard Bands as detailed below."          Source: <a href="https://www.comreg.ie/?dlm_download=broadband-public-protection-and-disaster-relief-bb-ppdr-spectrum-options-october-2020-update">https://www.comreg.ie/?dlm_download=broadband-public-protection-and-disaster-relief-bb-ppdr-spectrum-options-october-2020-update</a></p> <p><b>400 MHz Band Spectrum Award – Smart Grid – Awarded to the Electricity Supply Board (ESB)</b>          Part A consisted of one 2 x 3 MHz Lot (410 – 413 MHz / 420 – 423 MHz) for the provision of wireless communications for <b>Smart Grids</b>; and          Part B consisted of ten Lots of 2 x 100 kHz (413 – 414 MHz / 423 – 424 MHz) on a technology and service neutral basis. These Lots may be used to support Smart Grid, or for a range of other uses including Business Radio type applications.</p> <p><b>3800-4200 MHz frequency band</b>          "ComReg has received a number of enquiries related to private networks use of spectrum in the 3800-4200 MHz band. Therefore, ComReg intends to monitor and input to the development of any draft EC and ECC harmonising decisions on the use of the 3800-4200 MHz frequency band by terrestrial wireless broadband systems providing local-area network connectivity which could serve both private (e.g. enterprise) and public (e.g. community-type) networks."          Source: <a href="https://www.comreg.ie/publication/radio-spectrum-management-strategy-statement-2022-to-2024">https://www.comreg.ie/publication/radio-spectrum-management-strategy-statement-2022-to-2024</a></p> <p><b>3.6 GHz and 26 GHz</b>          The 3.6 GHz and 26 GHz spectrum have been awarded to economic operators.</p> <p><b>Test and Trial:</b>          ComReg also encourage users to apply for test and Trail spectrum for Proof of Concepts to prove technology and use cases. These licences are available for 12 months.          The spectrum ranges from 8.3 kHz to 300 GHz</p>								
<b>AVAILABLE BANDS</b>	<b>DETAILS</b>	<table border="1"> <thead> <tr> <th>LOW &lt; 1 GHz</th> <th>MEDIUM 1 GHz to 6 GHz</th> <th>HIGH &gt; 6 GHz</th> </tr> </thead> <tbody> <tr> <td> <b>400 MHz BB-PPDR</b>                      414 – 417 MHz / 424 – 427 MHz part of the 400 MHz Band. This is 3GPP Band 88 in the 3GPP E-UTRA specifications   <b>700 MHz BB-PPDR</b>                      In the 700 MHz Duplex Gap and 700 MHz Guard Bands, ComReg noted that spectrum in these bands could be made available for BB-PPDR in line with the flexibility afforded under Decision (EU)2016/687 (the "EC 700 MHz Decision").                      ComReg proposed that it could make available:  <ul style="list-style-type: none"> <li>• 2 x 5 MHz in the frequency range 698 – 703 MHz / 753 – 758 MHz band (i.e. 3GPP Band 68); and</li> <li>• 2 x 3 MHz in the frequency range 733 – 736 MHz / 788 – 791 MHz (i.e. 3GPP Band 28B).</li> </ul> </td><td> <b>3800 – 4200 MHz</b>                      ComReg intends to monitor and input to the development of any draft EC and ECC harmonising decisions on the use of the 3800-4200 MHz frequency band by terrestrial wireless broadband systems providing local-area network connectivity which could serve both private (e.g. enterprise) and public (e.g. community-type) networks.                       Test and Trail spectrum is available for                 </td><td>No details available on any band above 6 GHz being considered for Private Wireless Network Use</td></tr> </tbody> </table>	LOW < 1 GHz	MEDIUM 1 GHz to 6 GHz	HIGH > 6 GHz	<b>400 MHz BB-PPDR</b> 414 – 417 MHz / 424 – 427 MHz part of the 400 MHz Band. This is 3GPP Band 88 in the 3GPP E-UTRA specifications  <b>700 MHz BB-PPDR</b> In the 700 MHz Duplex Gap and 700 MHz Guard Bands, ComReg noted that spectrum in these bands could be made available for BB-PPDR in line with the flexibility afforded under Decision (EU)2016/687 (the "EC 700 MHz Decision"). Test and Trail spectrum is available for	No details available on any band above 6 GHz being considered for Private Wireless Network Use	
LOW < 1 GHz	MEDIUM 1 GHz to 6 GHz	HIGH > 6 GHz							
<b>400 MHz BB-PPDR</b> 414 – 417 MHz / 424 – 427 MHz part of the 400 MHz Band. This is 3GPP Band 88 in the 3GPP E-UTRA specifications  <b>700 MHz BB-PPDR</b> In the 700 MHz Duplex Gap and 700 MHz Guard Bands, ComReg noted that spectrum in these bands could be made available for BB-PPDR in line with the flexibility afforded under Decision (EU)2016/687 (the "EC 700 MHz Decision"). ComReg proposed that it could make available: <ul style="list-style-type: none"> <li>• 2 x 5 MHz in the frequency range 698 – 703 MHz / 753 – 758 MHz band (i.e. 3GPP Band 68); and</li> <li>• 2 x 3 MHz in the frequency range 733 – 736 MHz / 788 – 791 MHz (i.e. 3GPP Band 28B).</li> </ul>	<b>3800 – 4200 MHz</b> ComReg intends to monitor and input to the development of any draft EC and ECC harmonising decisions on the use of the 3800-4200 MHz frequency band by terrestrial wireless broadband systems providing local-area network connectivity which could serve both private (e.g. enterprise) and public (e.g. community-type) networks.  Test and Trail spectrum is available for	No details available on any band above 6 GHz being considered for Private Wireless Network Use							

<b>AVAILABLE BANDS</b>	When considering these BB-PPDR spectrum options, ComReg also noted that the EC 700 MHz Decision also provides for alternative uses for some or all this spectrum. These alternative uses are supplemental downlink ("SDL"), wireless audio Programme Making and Special Events ("PMSE") equipment and Machine-to-Machine ("M2M") radio communications.		
<b>BANDWIDTH</b>	2 × 3 MHz in the 400 MHz Band 2 × 5 MHz plus 2 × 3 MHz 700 MHz Duplex Gap and 700 MHz Guard Bands
