OVERVIEW

LAYER is a system for forming planes and activating space. It's designed to layer with other products, create visual hierarchy, or suspend as a pendant. It excels with lower ceilings, serves as an excellent build-in option for a space requiring more visual structure and sound absorption, and can adapt to other existing units. LAYER's versatility allows for discovery throughout the design process. There are 4 shapes in the LAYER family: DISC, OBROUND, TRIANGLE, and RECTANGLE.
