Next Generation Bus Priority

Tim Rivett, General Manager

improving public transport
through technology

- local authorities,
- bus operators,
- system suppliers,
- Consultants.

improving public transport
through technology

Extensive technical library

- Continuously evolving
- 60+ Documents

Development of standards

- UK
- European levels

- Cooperation
 - VDV
 - CEN
 - ITS (UK)

Practical guidelines

- How to
- Technical guidance
- Best practice
- Case studies

Education

- Sharing experience
- Day workshops
- Lunchtime Webinars
- Working groups

Don't forget
physical
measures

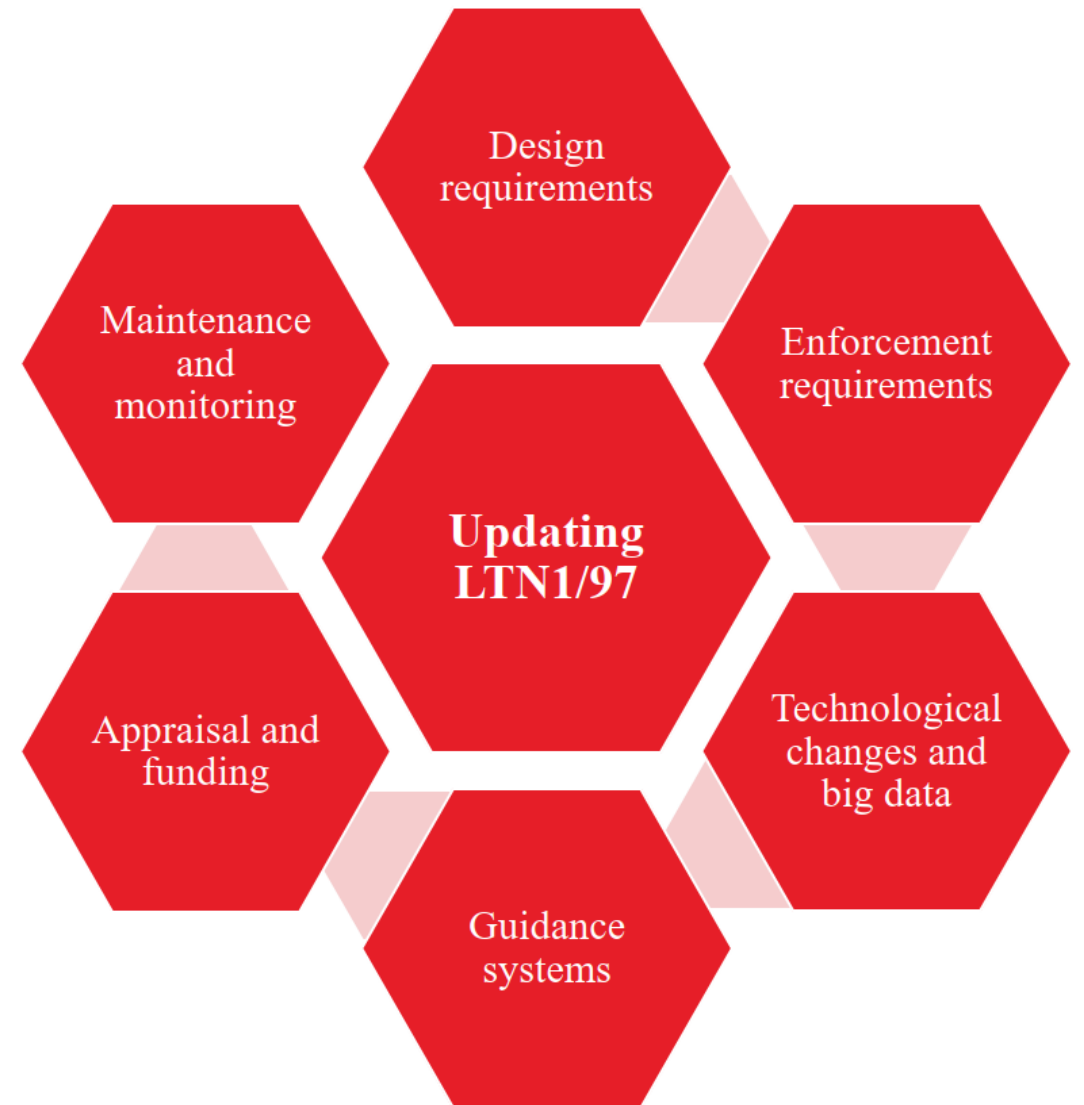

Local Transport Note

→ Public Transport Priority systems are **times**, and the **service reliability** of with local authority policy objective

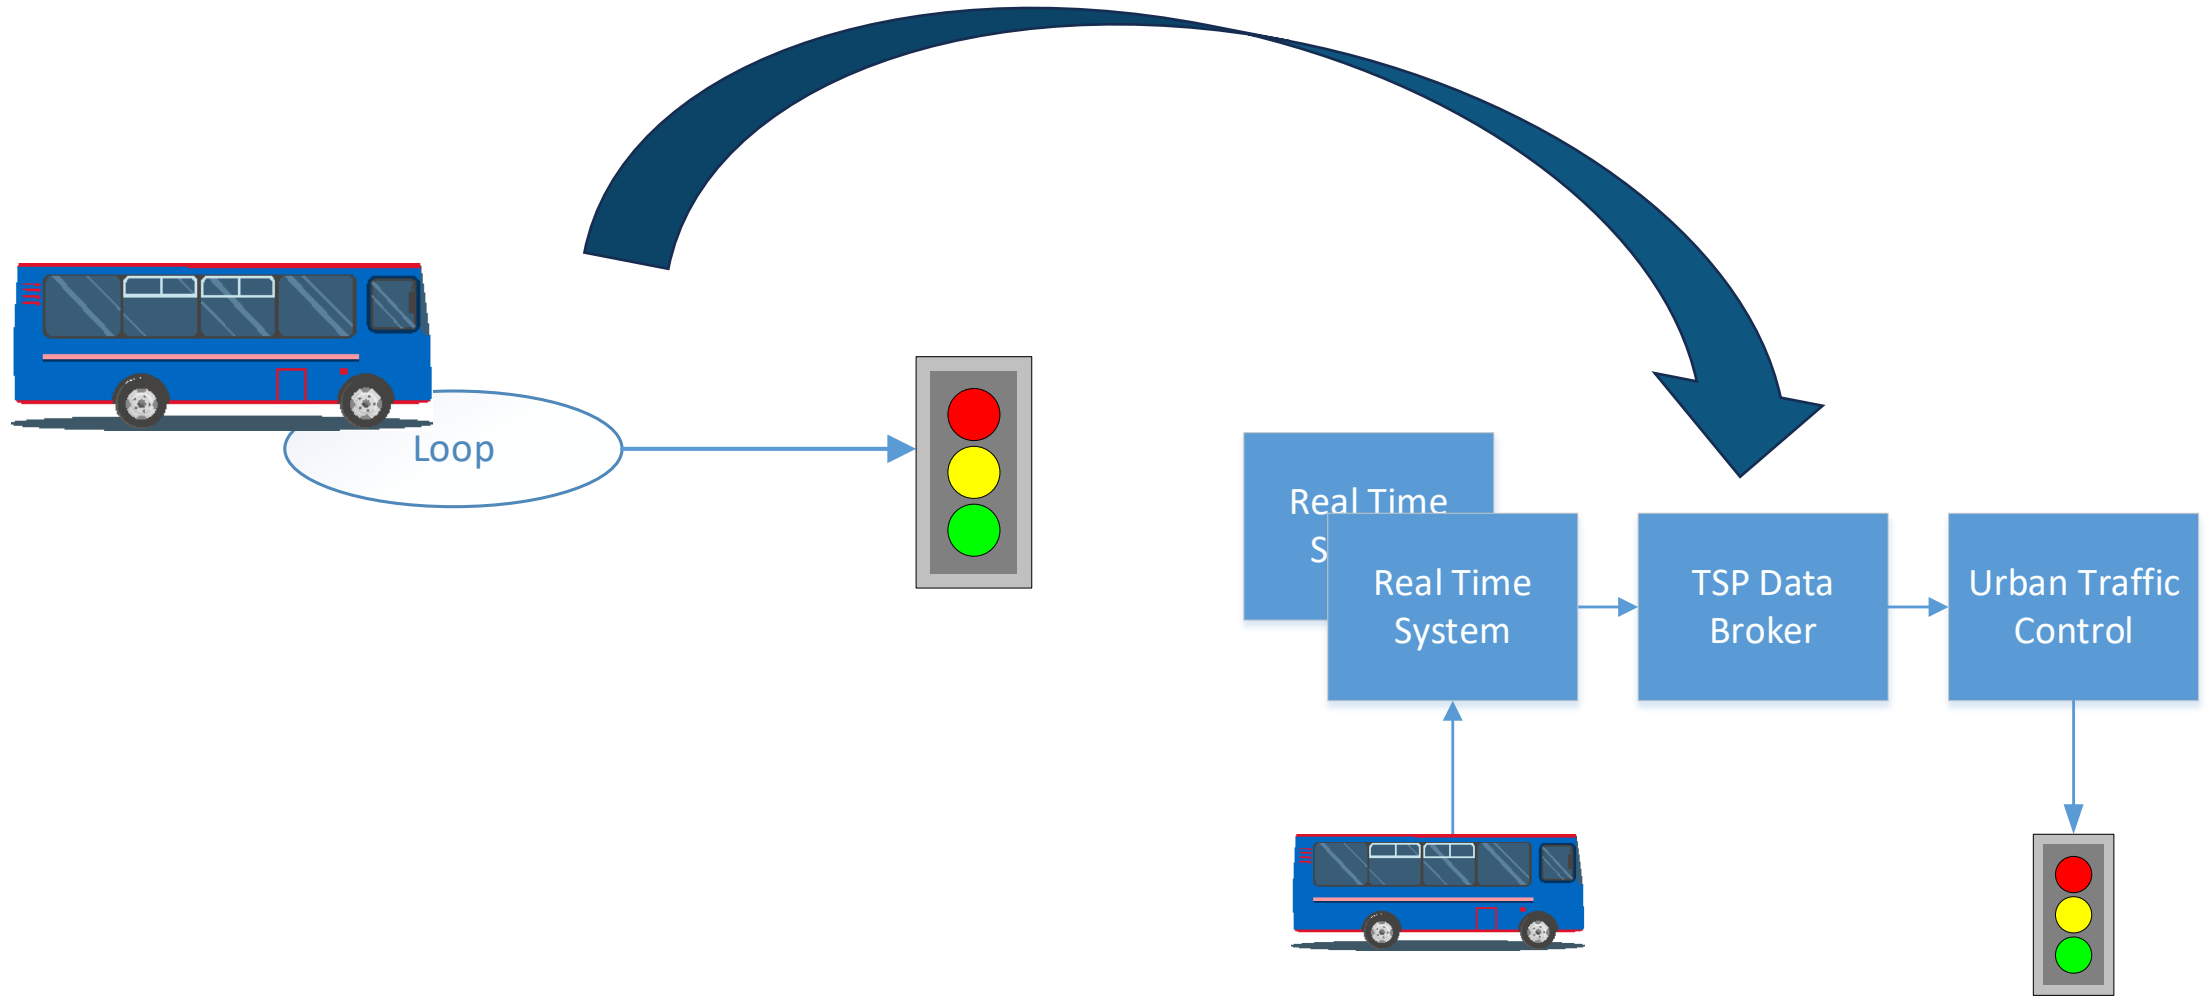

→ Current version 1997....

→ New version in production

→ Arup / Aecom

Current Technologies

Benefit

- Sheffield (2006); 2 sections of road in local mode
 - average journey time savings of 39 & 131 seconds
 - increased consistency of journey times.
- Leeds (2014/15); 400 junctions, 240 with central priority
 - BCR of 3 on a sample of 1/6 of sites setup. Full roll out BCR >8
 - Up to 8 mins saved on peak time journeys
- Manchester (2019); up to 31 seconds per junction
 - Impact on general traffic was broadly neutral.
 - Very high BCR of over 30.

Future

- More integration between bus and traffic management
- High frequency location updates
- Predicting arrival time
- Headway
- Reduce human overhead
- **Whole journey time management**
