Applied Behavior Analysis (ABA)
How is ABA useful? How can I get ABA services for my child?

What is Applied Behavior Analysis (ABA)?
Applied Behavior Analysis (ABA) is a method used to reduce challenging behaviors. ABA is also used to help people acquire and improve many skills including language, attention, social awareness, self-help, and play. ABA can measure how each behavior changes. It breaks down complex behaviors and skills into simple parts. ABA has been found to be very effective for children diagnosed with Autism Spectrum Disorder and other similar developmental disabilities.

How does it work?
ABA uses basic principles of learning to change behavior. ABA looks at the ABCs of behavior: The Antecedent (what happens before the behavior), the Behavior itself, and the Consequence of the behavior (what happens after the behavior). They change the consequences of the behavior in order to change the behavior itself. They look at the antecedents to figure out what might be triggering the behavior. ABA is very data driven. They track whether progress is being made, and if no progress is made the methods used are changed to find something that works for the child.

Terms to Know
Board Certified Behavior Analyst (BCBA):
A professional certified by a board to provide ABA therapy. A BCaBA has a Bachelor’s degree, a BCBA has a Master’s degree, and a BCBA-D has a Doctorate degree.

Center of Excellence (COE):
A healthcare facility approved by Medicaid to diagnose or treat Autistic Spectrum Disorders.

Discrete Trial Learning/Training:
Discrete Trial Learning is a method of teaching behaviors in simple steps. Instead of trying to teach an entire skill or behavior, the skill is broken down into small pieces. Your child then receives a small reward (praise, a high-five, a token) for each small success.

Reinforcement
A reward or other type of consequence (such as praise, a high-five, a token) given to increase a particular behavior.

Where is ABA therapy done and how long does it take?
- Can be done in your home, in a community setting, in a school, or in a clinic
- Includes parent training
- 5-25 hours/week

How does my child get ABA services?

1. If a medical or mental health provider has recommended ABA, ask them for an order for ABA therapy. You may need an evaluation from a specialist to get the ABA order, but you can get on the ABA provider wait lists even while you’re waiting for a specialist’s evaluation. Ask for a copy of the order for your records.

2. While you are getting the order for ABA therapy, ask your insurance company for a list of their approved ABA providers and get on their wait lists. We have a comprehensive list of Whatcom County ABA providers, including the insurances they accept, and there is one single ABA intake form that you can fill out and send to any/all of the Whatcom providers. Wait lists can be very long, so get on wait lists right away!

3. Send the ABA order to your insurance company for pre-authorization.

4. If your insurance approves ABA services, then call a provider to set up an appointment.

5. If your insurance company denies ABA therapy, ask for a letter of medical necessity from your doctor so you can appeal the decision, then contact WAAA (see below) for advocacy and information on how to proceed with the appeal process.

Many families have secured ABA therapy through the appeals process.

Don’t give up if you are denied services!

For information on how to access ABA services in Washington:

Washington Autism Alliance and Advocacy (WAAA)
Health Care Authority (HCA)
