BUILDING STRONGER HOMES

Tilt-wall construction homes, built and designed by Hercules Concrete Homes, use concrete for the slab, wall panels, and roof structure. This method is one of the fastest growing construction mediums available today. Tilt-wall construction offers homeowners a cost-effective, energy efficient, and durable residence with unlimited architectural versatility and appeal.

NEW HEIGHTS**

HOW IT WORKS

Tilt wall is the method of constructing a concrete home by pouring a concrete slab, installing concrete wall panels, and topping with a specialized roof. This method is one of the fastest growing construction mediums available today.

Tilt wall construction offers homeowners a cost-effective, energy-efficient and durable residence with unlimited architectural versatility and appeal.

First, a series of tilt-up concrete panels are constructed off-site at our Hercules Concrete Homes facility and then transported to the job site location where the walls and roof panels are installed.

The final phase involves the installation and interior build-out of the following: Door, Windows, HVAC, Plumbing, Electrical, Bathrooms, Kitchens, Floors

The overall construction period from start (slab poured) to finish (interior complete) is approximately 60 days.

CONCRETE HOME FLOOR PLANS

Review our Classic Concrete Home floor plan designs. We offer custom floor plans for both one & two story homes.

2 BEDROOM / 2 BATHROOM

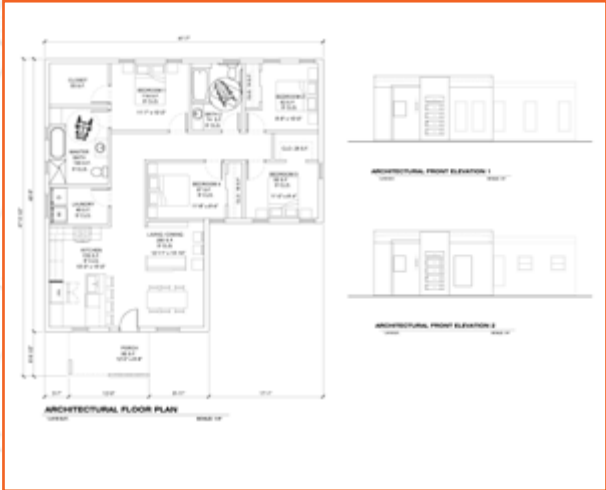

1045 Sq. Ft. | 70 Sq. Ft. Porch
