Up to 45 million people are blind and 135 million have low vision. 80% of visual loss can be prevented or cured.

Our expert panel of ophthalmologists and researchers will clearly lay out the current scenario in low- and middle-income countries and proven interventions that profoundly change the life trajectory of patients and their families.

From the session, you will:

- Learn more about the impact of eye disease and how you can contribute to improving eye health.
- Understand the global burden and impact of blindness and visual impairment on individuals and society.
- Learn about cost-effective interventions in eliminating blindness and increasing access to eye health for adults and children.
- Find out how research can be used to impact policy changes in support of vision health.

You will be able to question our panelists and find effective ways to reduce disparities in eye health effecting our most vulnerable populations.
