Seeking postdoctoral candidates with backgrounds in chemical biology; including molecular biology, protein expression, purification, and post-synthetic modification. Training in inorganic synthesis, spectroscopy, and protein crystallography a bonus but not required. Postdoctoral researchers in my lab develop a broad skillset and receive additional mentorship in scientific writing, development of project ideas, and leadership. You will work as part of an inclusive and intellectually engaged team, at an institution equipped with world-class facilities and instrumentation. Applicants of all demographic backgrounds are encouraged to apply!
