

DIGITAL ENGINEERING & DEVSECOPS: DELIVERING CAPABILITIES TO THE TACTICAL EDGE

TOGETHER, ICES AND ARIEL OFFER THE U.S. FEDERAL GOVERNMENT A FULL SPECTRUM OF IT SERVICES.

ABOUT

ICES-AP JV

ICES-AP JV is a small business joint venture between Intelligence Consulting Enterprise Solutions, Inc. (ICES), a Veteran-Owned Small Business (VOSB), and Savant Financial Technologies, Inc. d/b/a Ariel Partners (Ariel), an NWBOC-certified Woman-Owned Small Business (WOSB). With over a combined 40 years of technical experience supporting the U.S. Federal Government across various regions of the country, ICES-AP JV brings our collective expertise offering a full spectrum of IT services to support the ever-changing mission requirements of our existing and new customers.

WHY

ICES-AP JV?

ICES and Ariel joined forces as a JV to provide an end to end solution that works synergistically from upfront analysis and program planning to ongoing project governance using a unique model that saves money and utilizes the strength of each of our capabilities to create a streamlined and efficient program lifespan.

ICES ARCHITECTURE MATURITY MODEL

- Measures the effectiveness and value of Digital Engineering activities by assigning performance measures
- Assesses systems, subsystems, components, parts, models, products, projects, and strategic priorities
- Informs strategic planning, information resources management, IT management, and capital planning and investment control

ARIEL'S SEATBELT FOR JIRA

- Automates Agile governance
- Reduces the burden on Project Management Organizations (PMO) while reducing program risks.
- Improves your projects for better reporting and better business decisions
- Enforces data integrity, increases compliance, and improves accuracy
- Provides pre-built rules and the ability to customize, or create your own

**COMBINED CAPABILITIES FOR FULL LIFE CYCLE:
ALTERNATIVE ANALYSIS, PLANNING AND GOVERNANCE**

Solution: ICES IAMM Concept

IAMM tool provides a concise, repeatable, evaluation for an objective measure of credibility

The ICES Architecture Framework, combined with our Architecture Maturity Model, is unique and evaluates the Mission Architecture, Business Architecture, Security Architecture, Data Architecture and Solutions Architecture through a data analytics lens. In one effort before the ODNI, our enterprise architecture analysis of our customer's strategic direction enabled informed prioritized solution acquisition and investment decisions and funding allocations valued in the hundreds of millions of dollars. The senior ODNI reviewer commented about the architecture presented that the ICES [framework] should be used as the standard for all other architectures brought before the ODNI.

Seatbelt codifies Ariel's proven Agile governance framework, which was recently used at the Social Security Administration (SSA) for an Agency-wide assessment. Seatbelt for Jira improves the predictability and visibility of software development by improving the quality of data that is used to make critical decisions. This free plug-in via the Atlassian Marketplace enables each Jira project to create and enforce a set of business rules that automatically flag late, inaccurate, or incomplete data within Jira.
