

RAPIDRIDE

Frequent – Fast – Easy

COMMUNITY INVOLVEMENT

We collaborate with communities and project partners for each RapidRide line to make sure the new service works well. We study the corridor and ask the public about their needs and priorities.

GETTING TO THE BUS

RapidRide projects include improvements that make it easier and safer to use and get to the bus. Communities help by showing us where to add or improve things like street crossings, curb ramps, lighting or other safety features, and walking/biking paths.

STOPS AND STATIONS

We choose where to put stops with community needs in mind. Larger stops, called stations, have features like lit shelters with seating, real-time arrival signs, system maps, and ORCA readers that allow offboard payment and faster boarding through all three doors.

MORE SERVICE

RapidRide is faster and more reliable and runs 7 days a week. During weekday rush hours, buses come every 10 minutes or faster, and buses are actively managed by Metro's Control Center to keep them coming when you expect them. Buses come every 15 minutes or faster during the rest of the day and on weekends, and at scheduled times late at night and in the early morning.

FREQUENT, FAST, EASY

RapidRide buses get you to your destination quickly. They move more and stop less, get a boost from bus-only lanes and smart signals that keep traffic lights green or give buses a head start, and are fully equipped for easy boarding and exiting.

RapidRide FEATURES

RapidRide uses transit priority improvements to keep buses moving more and stopping less. The buses have features popular on other Metro buses—air conditioning, destination signs, security cameras and bike racks—plus free Wi-Fi, all-door boarding, and easy wheelchair restraint systems that let riders secure themselves without help.
