

J-5™

Chewings Fescue

Shade Tolerant

Cold Tolerant

Dark Color

Looking for that golf course links look? J-5 Chewings fescue is it, with its bunchy appearance and attractive links look making it well suited for golf roughs and naturalized areas.

One of our “hands off” varieties, J-5 does well under unmown conditions and ranked #1 in the California and Illinois NTEP trial for un-mown quality. J-5 also does well on low pH (4.5-8) soils and typically infertile sites. In fact, fairway fertilizer and watering should be avoided as its desirable clumpy look is best when the grass is “hungry”.

Key features

- Does well on low pH soils
- Attractive foliage for “links” look when kept unmown
- Good Red Thread resistance

**DARK
GENETIC
COLOR**

A-List Certified

J-5 is currently certified with the Alliance for Low Input Sustainable Turf. To learn more about A-List and the certification process visit their website at: a-listturf.org

Technical Information

Applications

J-5 won't fade in the shade. J-5 works well with shaded landscape areas. But don't forget, a higher cutting height (>1.5 in.) is recommended in the shade to optimize turf health. J-5 has also demonstrated good resistance to Red Thread, and Poa annua won't push J-5 around since it is resistant to encroachment. J-5 has a dark green fine textured appearance making it a great choice amongst Chewings fescues. J-5 breaks winter dormancy and greens up early in the spring for increased aesthetic value.

Maintenance

Seeding Rate:	4-6lbs./M*
Maintained at Turf Heights:	0.5-1lbs./M (thin)
Unmown Areas:	3-5lbs./M (dense)
Overseeding into Existing Turf:	6-10lbs./M
Mowing (Recommendation):	2-4"
Mowing (Down To):	0.5" (Use higher cut under shade)

*M=1,000 square feet
