Table 13  
**Q7. In the UK, child benefit is based on the income of individuals rather than families. No child benefit is paid in families where one parent earns £60,000 a year or more, whereas families where both parents separately earn up to £50,000 a year are entitled to receive child benefit of £24 a week for the eldest child, and £15.90 a week for any other children. Would you support or oppose a proposal to make child benefit entitlement dependent on family income rather than the income of individual parents?**  
**Base: All respondents**

Table 14  
**Q7. In the UK, child benefit is based on the income of individuals rather than families. No child benefit is paid in families where one parent earns £60,000 a year or more, whereas families where both parents separately earn up to £50,000 a year are entitled to receive child benefit of £24 a week for the eldest child, and £15.90 a week for any other children.**  
**Would you support or oppose a proposal to make child benefit entitlement dependent on family income rather than the income of individual parents?**  
**Base: All respondents**
