ABORTION CARE IN NEW JERSEY

- Pregnant people in New Jersey have limited access to abortion care. In 2017, 25% of people lived in New Jersey counties that did not have an in-person abortion clinic.¹
- Abortion is an essential, time sensitive health care service. Medically unnecessary restrictions push medication abortion care, which is a non-invasive abortion option that is approved by the FDA for use up to 10 weeks in pregnancy, out of reach for many.²
- Being denied care negatively impacts the health and wellbeing of pregnant people and their families. Women who were denied a wanted abortion had four times greater odds of living below the Federal Poverty Level and were more likely to experience poorer health outcomes for years after the pregnancy.³
- People seeking abortion already face significant barriers to receiving quality care. Restrictions on abortion care and insurance coverage disproportionately impact people working to make ends meet, immigrants, young people, and people of color.³
- New Jersey residents support access to abortion care. More than 7 in 10 New Jersey voters [75%] believe that abortion should be legal in all or most cases.⁴

TELEHEALTH: A TOOL FOR EXPANDING ACCESS TO MEDICATION ABORTION CARE IN NEW JERSEY

- Telehealth is a tool that can expand abortion access. Research shows that medication abortion care can safely and effectively be delivered through telehealth via a phone and/or video visit with a provider, reduces barriers to care, and can help patients access care earlier in pregnancy.⁵
- Overall, telehealth for medication abortion care policy in New Jersey is expansive, but temporary telehealth policy needs to be made permanent and improved to fully cover medication abortion care.⁶
- Given the threat that many states may severely restrict or ban abortion access, flexibility in telehealth care is imperative for New Jersey and the abortion care ecosystem.

POLICY IMPACTING PROVISION OF TELEHEALTH FOR MEDICATION ABORTION CARE IN NEW JERSEY

- Blood testing requirement: New Jersey law requires patients to undergo certain blood testing prior to a medication abortion.⁷
  - **Impact:** Mandated Rhesus (Rh) factor testing forces patients to undergo tests that may not be medically necessary and increases the cost of care. Rh testing and treatment should be determined by a pregnant person’s physician.
    - Guidance from leading medical organizations, including the American College of Obstetricians and Gynecologists, specifically states that Rh testing and treatment should not pose barriers to people accessing medication abortion care.⁸
    - The World Health Organization (WHO) and many countries – including the U.K., the Netherlands, Denmark, Sweden, and Canada – do not recommend or do not require testing and treatment for Rh-negative individuals early in pregnancy.⁹
- New Jersey requires intrusive, inequitable, and burdensome certification requirements: Every New Jersey Medicaid patient must reveal the reason for their abortion, and a medically unnecessary certification that utilizes gendered language must be submitted.¹⁰
  - **Impact:** The use of gendered language and requiring identification of medical necessity for abortion exacerbates inequities in accessing care, especially for non-binary people, people of color, and those struggling to make ends meet.

Impact: This requirement also saddles providers with unnecessary administrative burdens and is not medically necessary.

**POLICY IMPACTING COVERAGE OF TELEHEALTH FOR MEDICATION ABORTION CARE IN NEW JERSEY**

- **There is uncertainty regarding parity beyond 2023:** As background, coverage parity requires the same services be covered via telehealth as would be covered if delivered in person. Payment parity requires the same payment rate or amount to be reimbursed via telehealth as would be if it had been delivered in-person.\(^\text{11,12}\)
  - While payment parity is required of public and private insurers for interactive video visits, audio-only visits are required to be reimbursed at a rate that is at least 50% of the in-person reimbursement rate. Both of these requirements are temporary only through the end of 2023.\(^\text{13}\)
    - **Impact:** A video visit requirement unnecessarily limits access to care for patients who are in areas with limited bandwidth, or who lack devices or sufficient minutes on cellular plans for telehealth video visits.
    - **Impact:** This has a disproportionate impact on people of color and those struggling to make ends meet.
    - **Impact:** Providers may be less likely to offer patients access to telehealth services that cannot be reimbursed, forcing unnecessary in-person visits and inequitable access to care.

- **No coverage for translation services:** Providers participating in New Jersey Medicaid are required to provide translation services for Medicaid beneficiaries, including via telehealth. However, there is no requirement for public or private insurance to cover the costs associated with translation.\(^\text{14}\)
  - **Impact:** Providers may be less likely to offer patients with translation needs access to telehealth services, forcing unnecessary in-person visits and inequitable access to care.

- **No coverage for mailing medications:** In New Jersey, there is no requirement for public or private payers to cover the cost of mailing medications.
  - **Impact:** Without this coverage, providers and/or pharmacies may be less likely to offer patients the option of mailing medications, forcing unnecessary in-person visits and inequitable access to care.
