

WHITEPAPER

The Future of Payments

Reflections

GGO is on a journey to 2030.

In 2021, we decided to do something great for our corporate actions, and we always knew we can do more. So we set an even more ambitious goal — to make our products go viral and useful, and from there we started our product called GOGAME that brings all the mobile games into one place, thanks to Unity and Unreal Engine, we were able to achieve it using Lifetime Energy and spread it across the second biggest nation in the world — India.

This continuous innovations in Gaming made us 5th Largest Gaming App, and by the end of 2022, we had almost 45 Million Players from 4 countries that made us a self-made startup with completely bootstrapped and no investors. We had captured nearly a quarter (26%) of the mobile gaming market in four countries. Our game is highly addictive and easy to play, attracting users who spend an average of three hours per day playing it.

But we wanted to do something different that suits our needs and provides a broader perspective, so we selected the industry - "Cryptocurrencies" that was growing at a rate of 75% year-on-year. This led us to the decision to launch an impressive product in the world of crypto. So, here's the main idea: Since 2007, Cryptocurrencies have gained significant attention and brought wealth to many users. However, the true potential of such a program is not well understood by most people due to its complex nature.

So, in order to expand our business and explore new opportunities, we decided to introduce a new initiative called "Staking Programs". These programs, although not widely known or heavily invested in, were actually quite successful. Our main objective was to enhance the efficiency and stability of existing liquidity protocols, which were being managed by third-party validators and engines. These entities acted as controllers and generated profits through gas fees.

However, as we delved deeper into this field, we realized that there was still untapped potential. This realization prompted us to develop a groundbreaking solution known as "Staking Bridges".

These bridges are highly advanced and intricate structures that enable seamless liquidity flow and effortless management of account book value across different cryptocurrencies. With this innovation, we have discovered a unique way to facilitate the exchange between Fiat and Crypto, and we firmly believe that it has the potential to revolutionize the entire market. Its versatility makes it applicable in any corner of the world.

As we continued to push ourselves by bringing new and clean resources for the general public, it became very clear of the future that's belonged to, and the balance it will bring to decentralized networks by overpowering centralized exchanges or organizations. Today, about 7% of the world's liquid pool from exchanges and swaps goes through GGO. This significant portion demonstrates the growing trust and adoption of our platform. However, our ambition doesn't stop here.

Our goal is to reach at least 50% of the Net Pool Value (NPV) by 2030. This ambitious target will require us to continuously innovate and expand our reach. By extracting materials responsibly and sustainably, we ensure that our operations maintain the highest security and audit standards. This commitment to security and transparency will be the key focus to power our Liquidity Protocols and drive further growth and success in the future.

GGO is on a journey to make Crypto and Fiat more Secure, Accessible, and Secretly Powerful Instrument for the World to use.

About GGO

GGO (Global Gateway Organization) is on a paramount mission to develop groundbreaking technology that aims to revolutionize the payment system by bridging the gap between web2 and web3. By collaborating closely with local banks and exchanges, GGO is dedicated to making this vision a reality in the most seamless and user-friendly manner possible. Through our relentless pursuit of innovation, we are committed to transforming the way payments are processed and empowering individuals in the digital age.

Uniquely Integrated QR Codes

The QR code offered by our company is undoubtedly the best in the industry. It not only supports various cryptocurrencies but also provides seamless integration with multiple currencies. This cutting-edge technology ensures that our customers can easily and securely transact using their preferred digital assets or traditional forms of money. With our QR code, you can enjoy the convenience and versatility of a single solution that caters to both crypto enthusiasts and users of conventional currencies.

**SEAMLESS QR INTEGRATION

An introduction to Universal Payments Infrastructure

The next 10 years of finance in your hands

CryptoDukaan

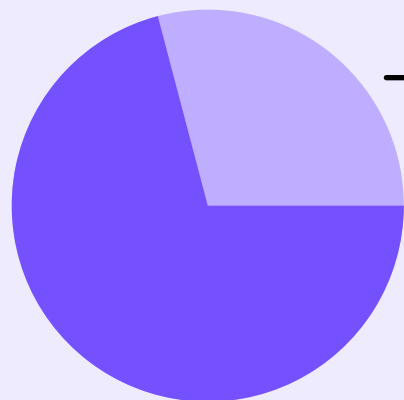

CryptoDukaan is a cutting-edge payment aggregator and processor that is designed to provide seamless liquidity switching between banks and cryptocurrency. With its advanced features and built-in KYC (Know Your Customer) and AML (Anti-Money Laundering) Activators, CryptoDukaan ensures a fully-secured interface on any device or software, without incurring any additional costs. This revolutionary platform is built for everyone, offering a user-friendly experience without the need for any special signups.

**We have designed
shockingly simple and
easiest payments and
checkout method
using Crypto and
Currencies.**

The era of CryptoDukaan

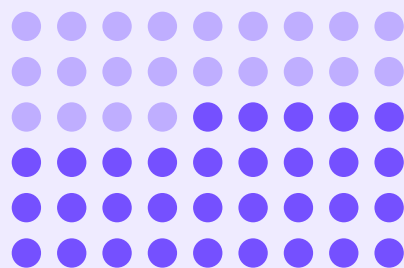

\$60.7T

This was the total contribution in the crypto market since 2021, which is approximately 30% of global market insights.

35%

Every year, cryptocurrency aims to replace traditional currency (fiat). With the increasing use of digital technologies, cryptocurrency strives to capture a 35% market share compared to fiat and grow by 5% each quarter.

100 of 43

Continuous Adaption for Crypto makes it easy for entrepreneurs, millennials, and Gen Z users to understand and adapt to new age concepts.

Powerful Engine

Driven by SHA-256 Security and Nanorite Engine, the Capacity to handle almost 2 Million Hits every second, and second largest dex converter in the world.

Neutral Capacity

Contains zero tolerance and no-border zone transactions, just you account and yourself makes it easier to make payments anytime and anywhere. Except from Space. :-)

Ease of Use

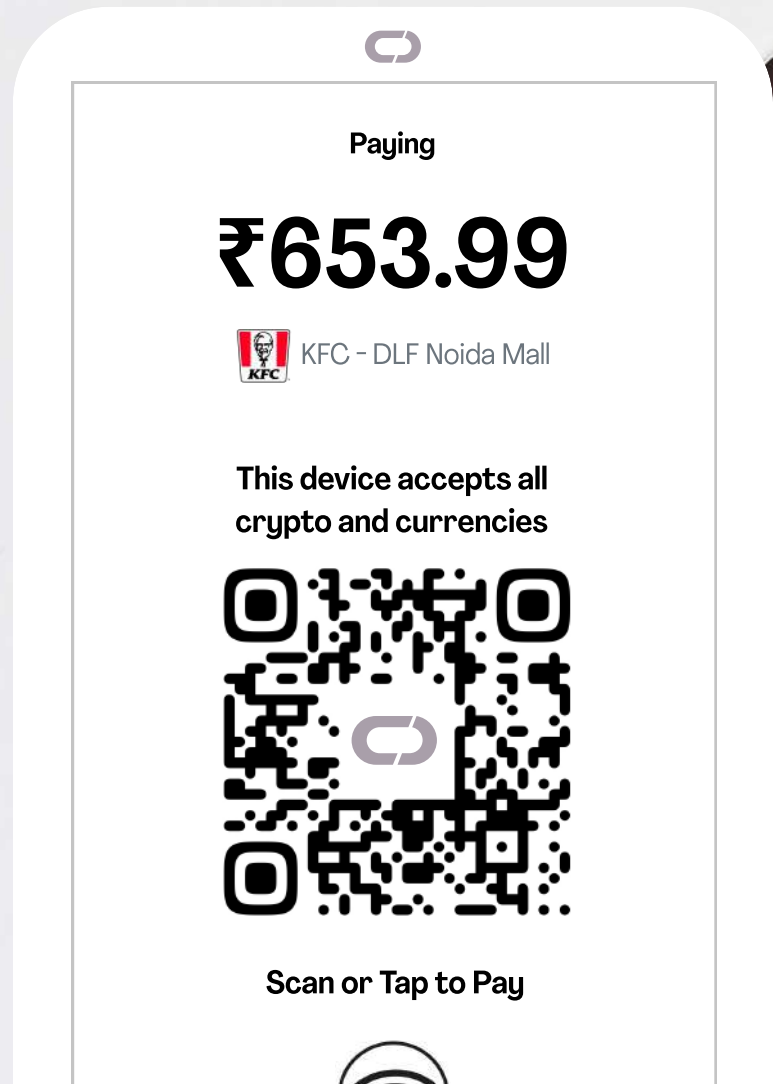

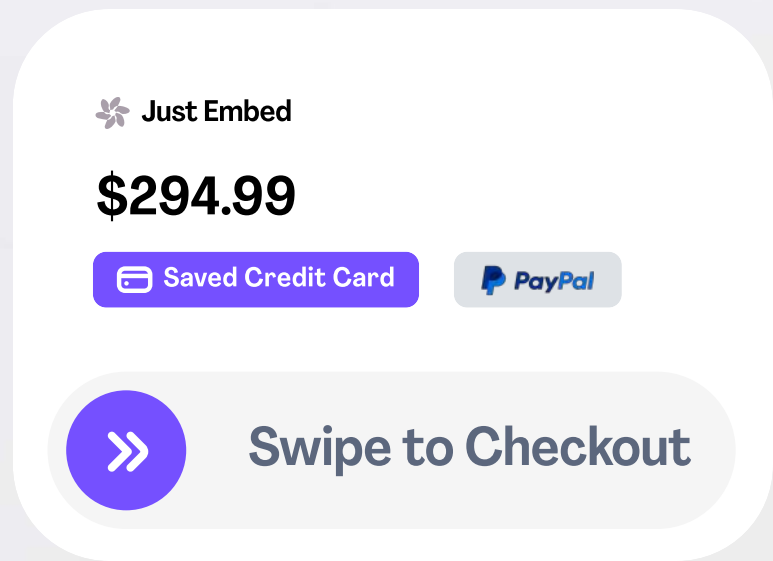

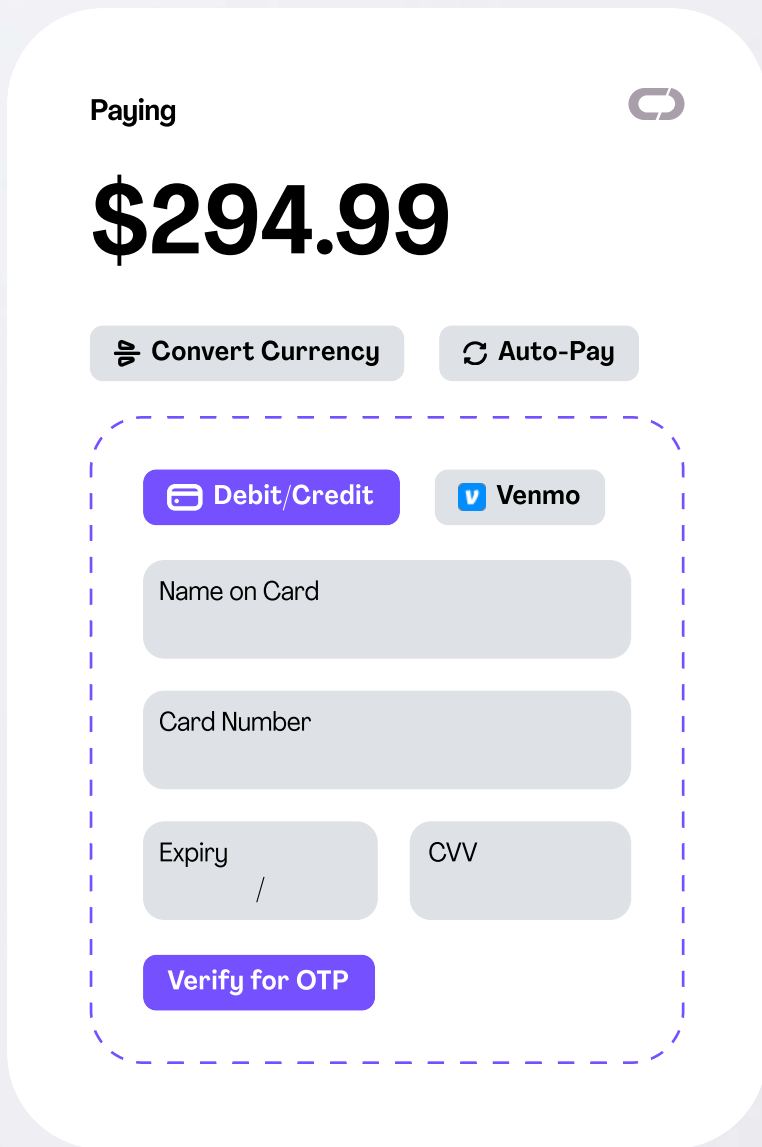

No requirement of additional softwares or apps, you can use your existing data or accounts connected to your apps or devices without any restrictions.

Quick AML Approach

A trigger is created to activate Quick AML for any transactions flagged as red or yellow from any location. This allows for efficient monitoring and detection of potential money laundering activities, ensuring compliance with regulatory requirements and safeguarding against financial risks.

Bank & Crypto Switch

A Switch is placed between Banks and Cryptocurrency platforms. This innovative solution, developed by CryptoDukaan, automates the entire process and effectively eliminates the need for costly markups, foreign exchange fees, development charges, and gas fees. By leveraging Switch, users can enjoy a hassle-free and cost-effective experience when transacting with cryptocurrencies or fiat.

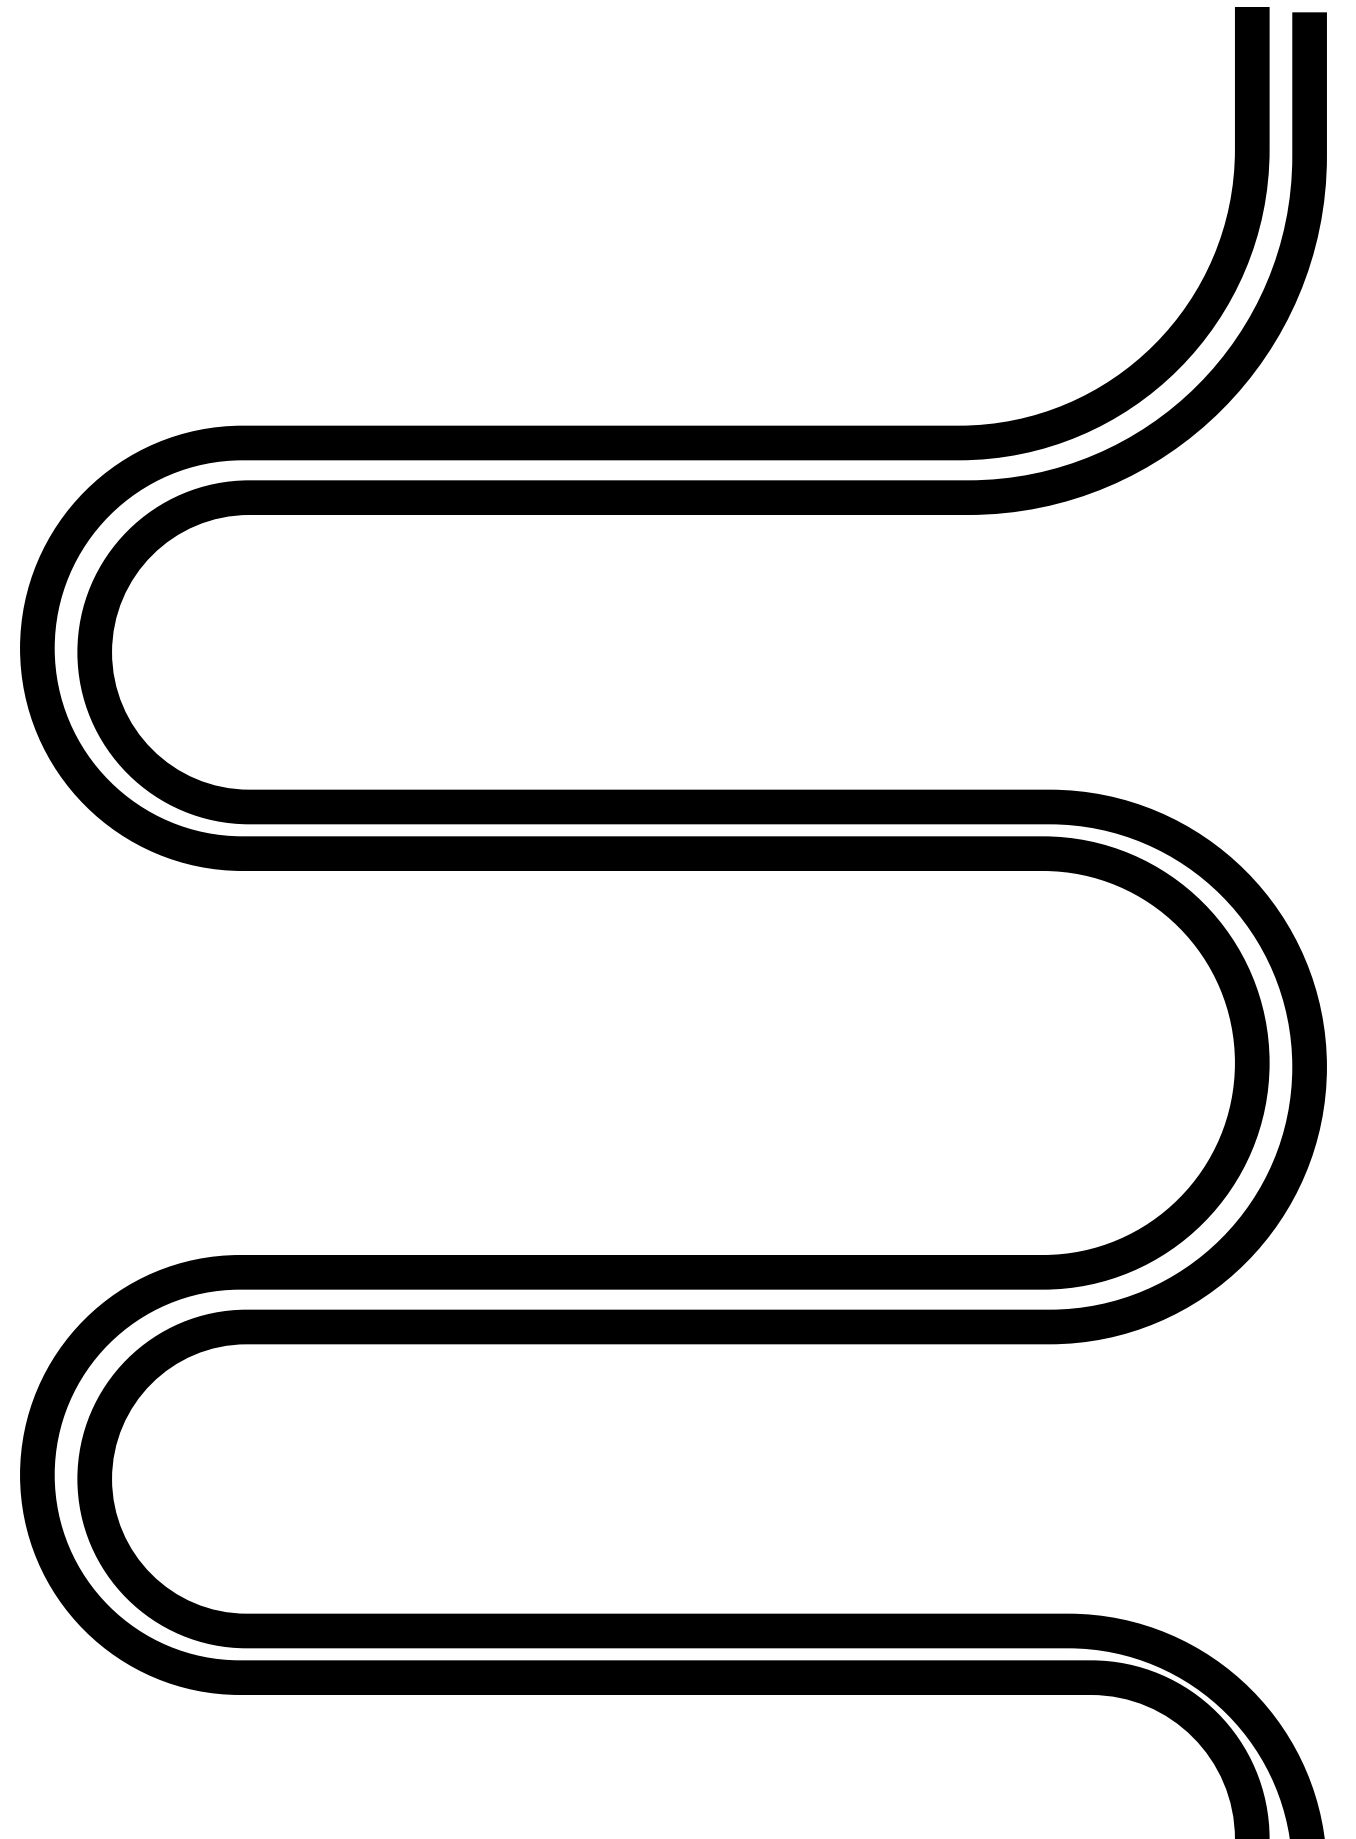

Dominating the Payments Industry Soon.

The Lifeline of CryptoDukaan

Quick QR

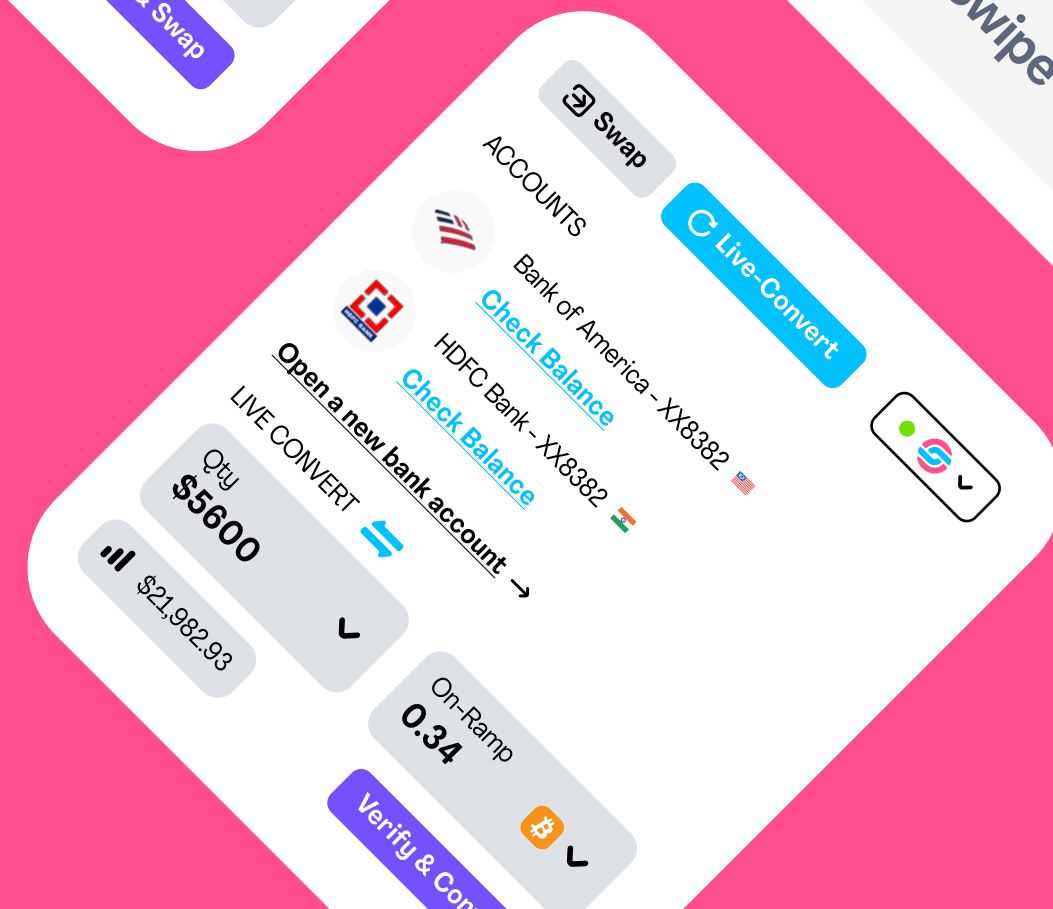

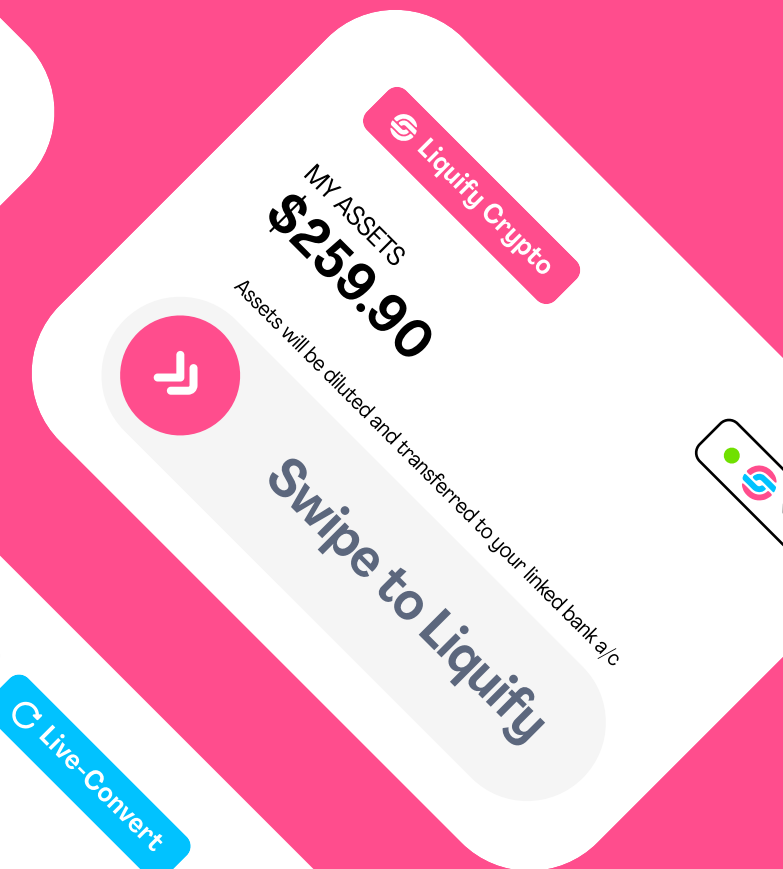

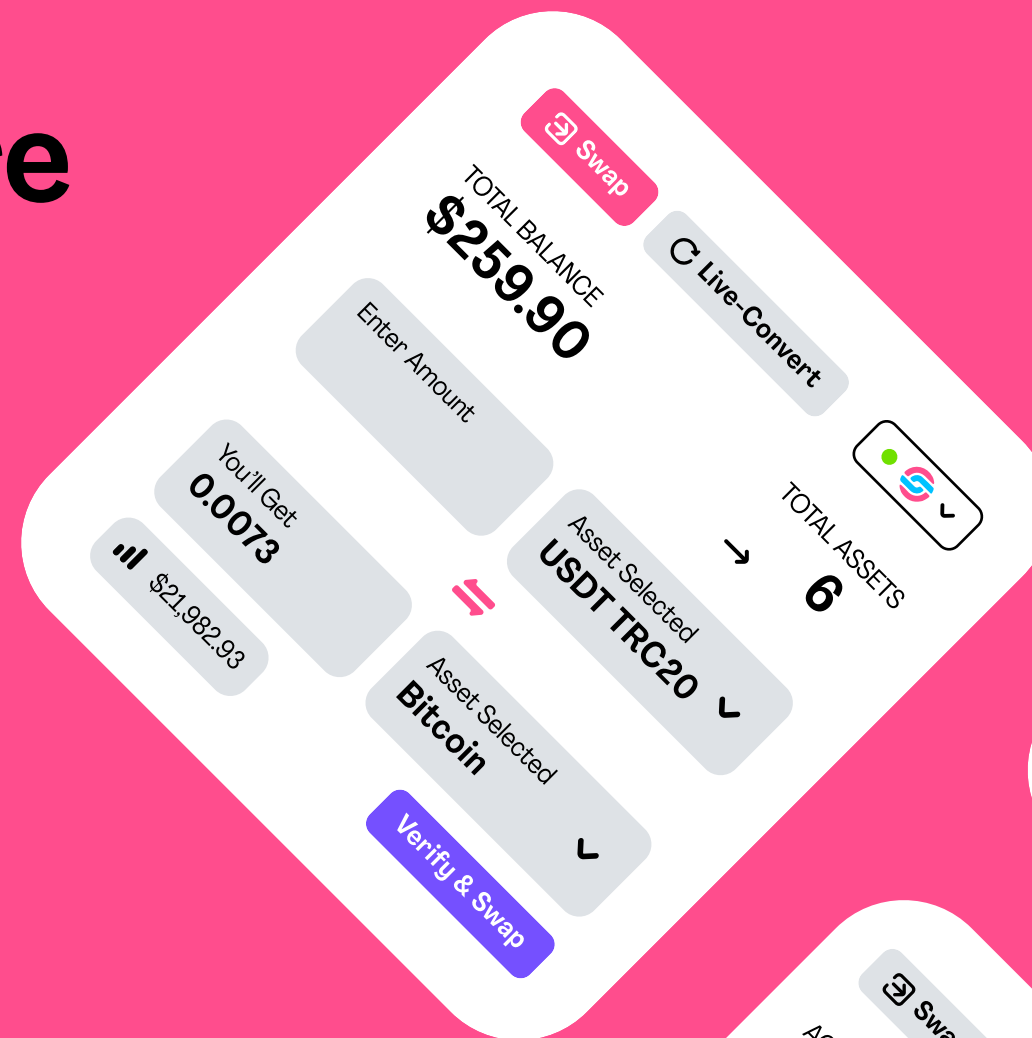

Quick QR is an essential component of CryptoDukaan and serves as a robust platform for facilitating transactions involving Cryptocurrencies and Fiat currencies. It employs a unique approach by generating a Single Unique QR code for each transaction, ensuring security and convenience. This QR code remains valid for a period of 24 hours, allowing users to make payments using both crypto and fiat currencies. Additionally, the transaction charges associated with Quick QR are kept at a minimum, making it a cost-effective solution for users.

Swap anything & anywhere

Liquify Swap

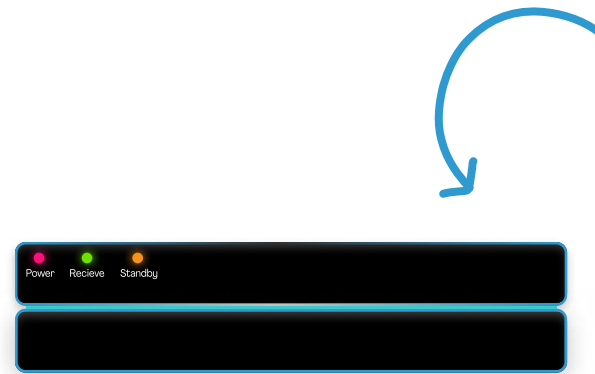

Liquify serves as a cutting-edge financial solution that seamlessly bridges the gap between traditional banking systems and the vast world of cryptocurrencies with on-ramp and off-ramp. With Liquify, users are empowered with the ability to effortlessly and securely exchange their funds between fiat currencies and various cryptocurrencies. By providing direct connectivity to both banks and the crypto ecosystem, Liquify ensures that users can enjoy hassle-free swaps from fiat to crypto or vice versa, all while benefiting from enhanced liquidity.

Swipe devices for New-Gen

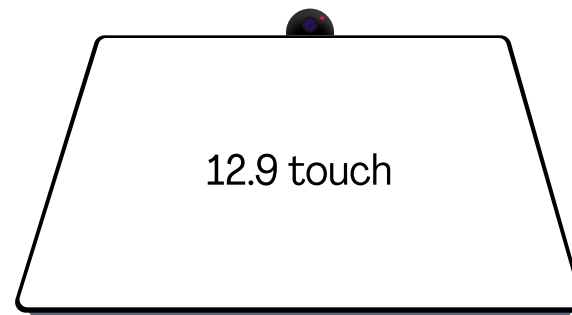

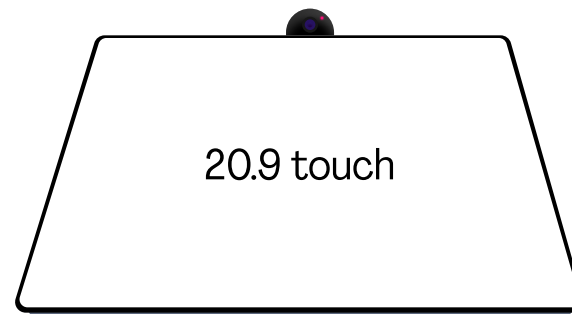

Just Swipe

Just Swipe is a convenient and user-friendly portable device that ensures the security of card data every time it is accessed. Not only is it compact and easily fits into anyone's pocket, but it also features a single fingerprint authentication. With the integration of Just Embed and CryptoDukaan, this innovative device enables self-checkout and instant-checkout options without the need for any One-Time Password (OTP). This means that users can enjoy a seamless and hassle-free payment experience while maintaining the highest level of data encryption and protection.

Ai MAGNETIC READER

An offline magnetic reader is a device that generates a unique hash every time a transaction occurs with the client. With this device, there is no longer a need to carry around swiping machines. Instead, you can conveniently perform transactions using this device and have full control over it through a dedicated mobile application. This innovative solution eliminates the hassle of traditional payment methods and provides a seamless experience for both businesses and customers.

SELF-CHECKOUT & POS MACHINES

A Built-in Card Tap, QR Code Scanner, Bar Code Scanner, Cash Collector, Cash Distributor, Ledger Maintenance, P&L Statement Generator, Announcement IFTTT, and more embedded into one single screen, there are no separate parts that's sold, it's all inside one screen. Additionally, this integrated screen offers a seamless user experience by providing all these features in a single interface, eliminating the need for separate devices or components. Users can conveniently access and utilize the various functionalities without the hassle of purchasing and managing multiple individual parts. This integration not only enhances user convenience but also streamlines the overall operation and maintenance process. With all these features consolidated into one screen, users can easily perform a wide range of tasks, such as making payments, scanning codes, managing cash, maintaining ledgers, generating P&L statements, and receiving automated announcements, all in a unified and efficient manner.

Just stick anywhere and go

Just Embed

Just Embed is an innovative and user-friendly stick-and-go checkout system designed to streamline the checkout process for quick commerce, delivery agencies, and logistics. With its instant tap & pay solutions, Just Embed caters to businesses of all sizes, whether they are small, medium, or large scale. By implementing Just Embed, businesses can enhance their customer experience, increase efficiency, and simplify payment transactions. Whether it's a small local shop or a large multinational corporation, Just Embed is for everyone.

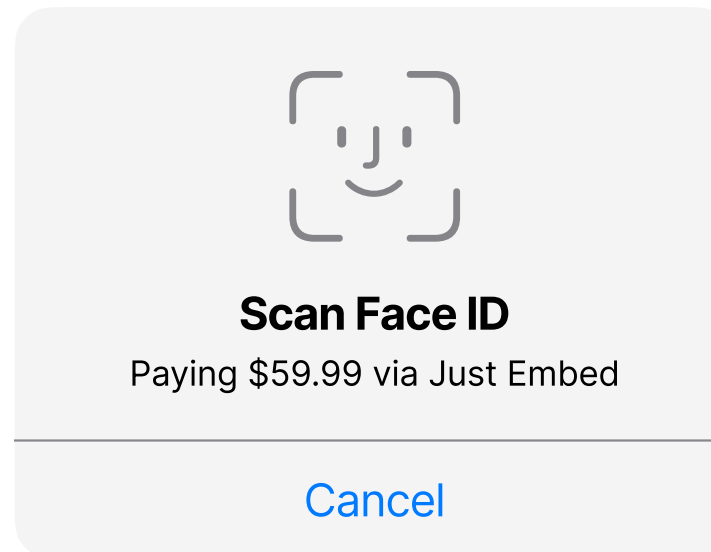

THIS IS SQUEAKER

An AI robot signal for payments and transactions alerts in real-time basis that accepts debit/credit card and 40+ different payment methods.

THIS IS NAUKAR

A NFC tag that helps you track pieces anywhere in the world, and can be used for luggage's or logistics.

EMBEDS LOCALLY

Just Embed adapts to your device without any third-party service requirement, and can be used in Laptops, Phones or TVs.

GGO Crypto

GGO crypto will be the primary and dominant token used for all transactions that take place within the CryptoDukaan Ecosystem. The Genesis Block, which was established on April 21, 2022, has a token limit of 2 billion. It was launched with an initial shared-liquidity protocol of \$2 million and a price lock of \$0.01. As news spread through word of mouth, the market quickly recognized the immense potential of GGO and users eagerly flocked to purchase it. This rapid adoption can be attributed to the innovative concept behind CryptoDukaan, which captivated the interest and enthusiasm of cryptocurrency enthusiasts worldwide.

GGO Crypto was established with the primary objective of ensuring stability in transactions and generating revenue for its holders. This is achieved through the distribution of Net Pool via the GGO Liquidity Protocol. The protocol has proven to be highly profitable for GGO holders, attracting a large number of users. As a result, the user base of GGO Crypto has grown significantly, creating a thriving ecosystem for its users.

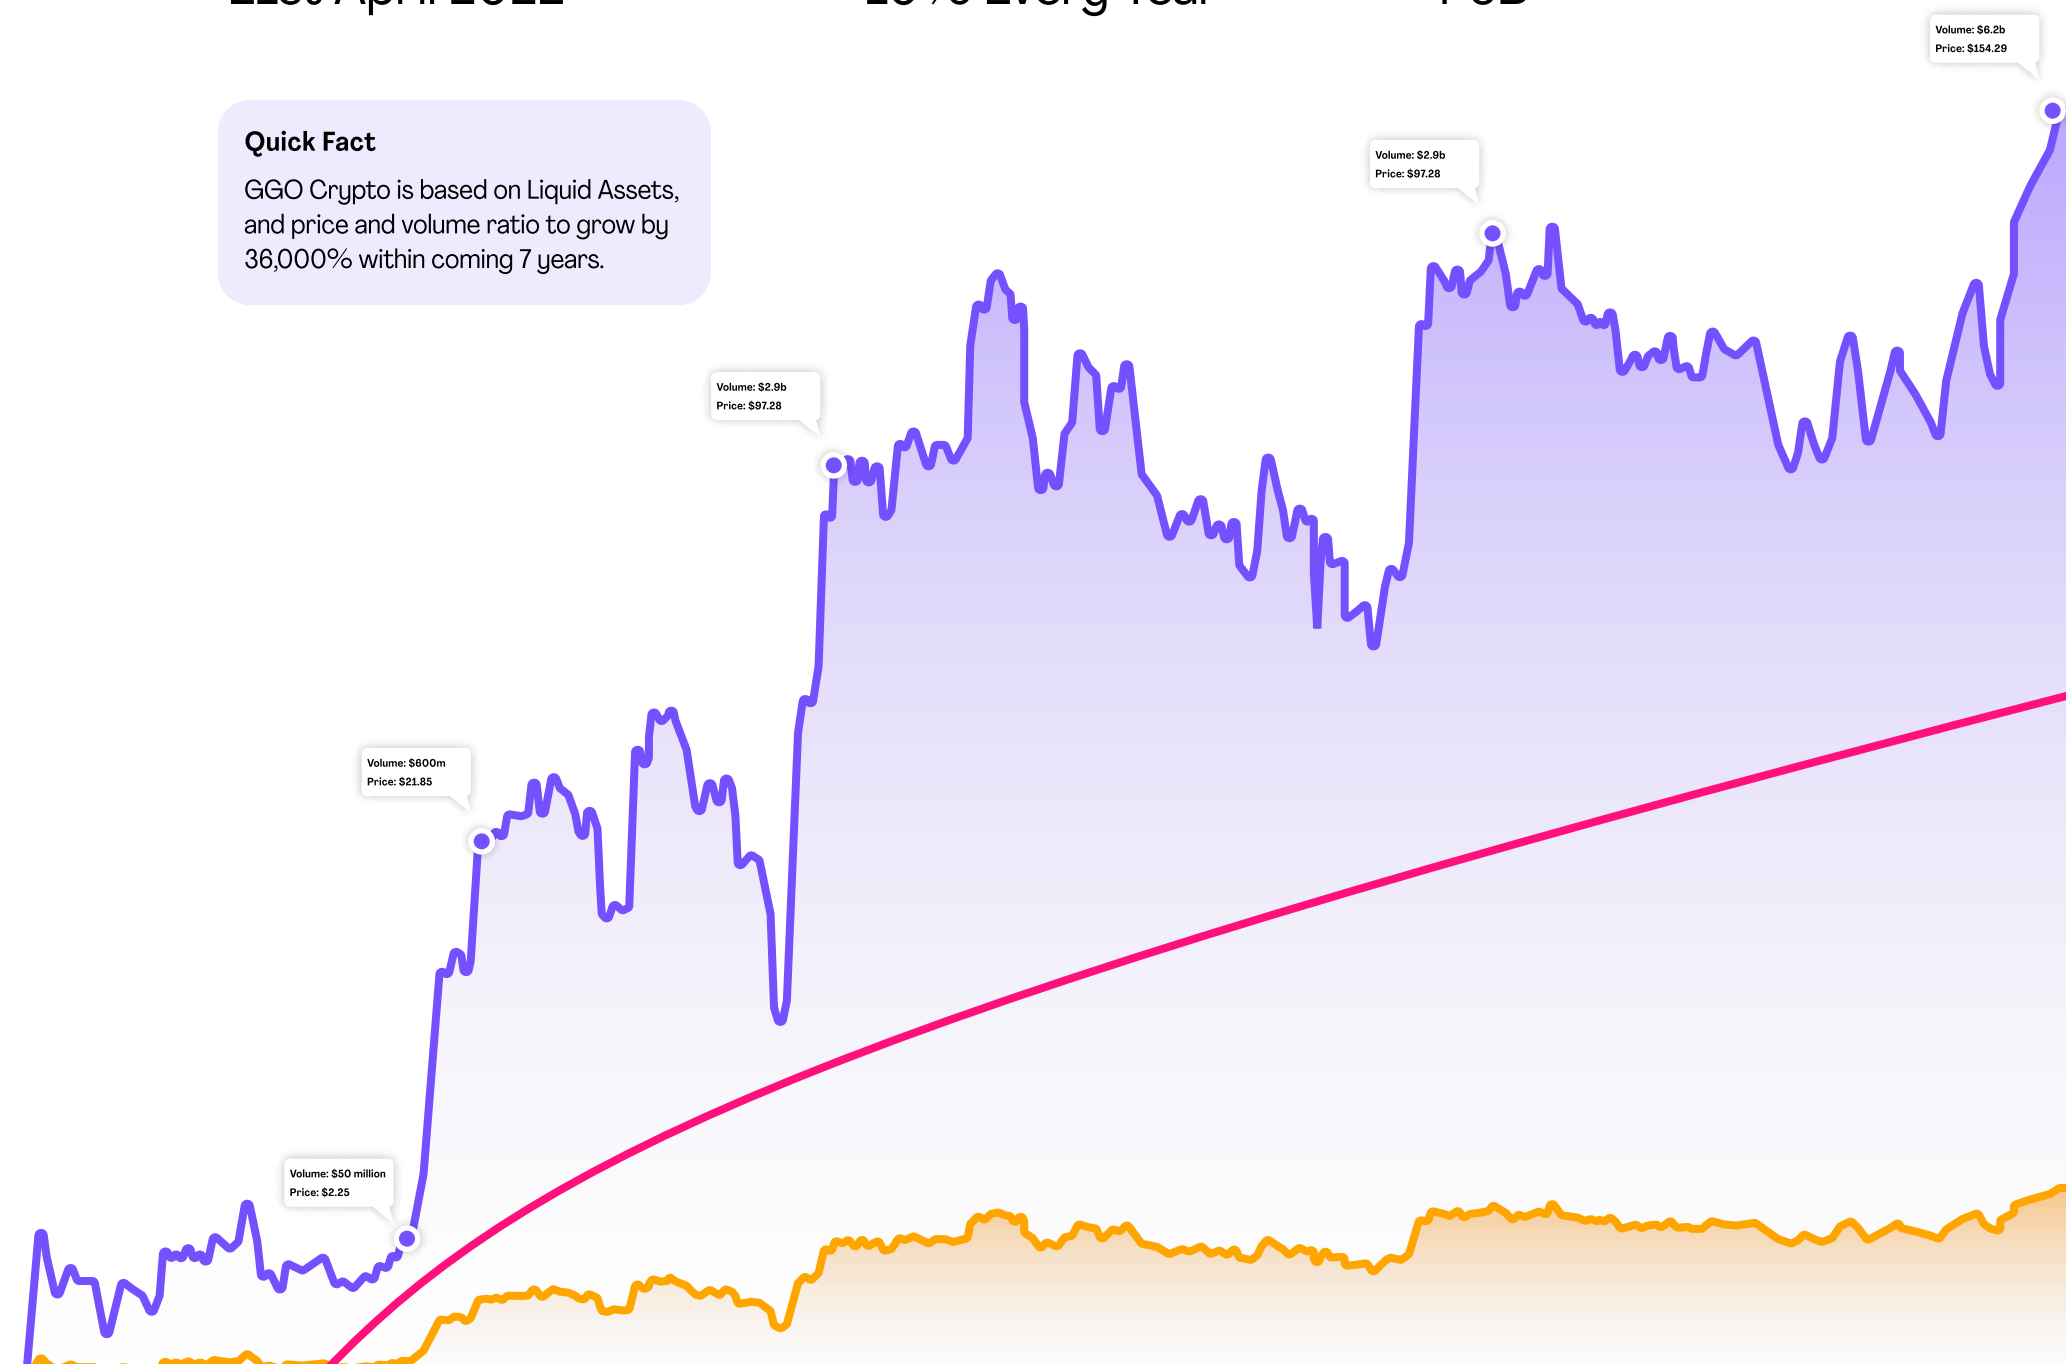

During the initial phase, GGO was initially introduced as a Longevity Crypto, aiming to provide users with a secure and safe means of holding assets. However, as the project progressed, it was later converted into a Governance and Liquidity-Based Asset, offering users additional benefits and opportunities to actively participate in decision-making processes and enhance their overall experience.

Distribution & Network

GGO has developed a vast and sophisticated network of Smart Contracts to provide comprehensive protection for the Genesis Liquidity Protocol. This network acts as a robust defense system, effectively shielding it from potential threats such as hackers, bots, or spiders that may attempt to exploit its inherent vulnerabilities. By implementing these Smart Contracts, GGO ensures the integrity and security of the Genesis Liquidity Protocol, enabling it to function smoothly and securely without any compromise on its core principles.

Understanding Spectromics

A hand is shown holding a glowing plasma ball. The ball is filled with intricate, filamentary patterns of blue and red light, resembling a complex network or a spectral display. The background is dark, making the vibrant colors of the plasma ball stand out. The hand is positioned on the left side of the frame, with fingers gently gripping the ball.

When GGO was initially created, it was intended to be just another cryptocurrency. However, we realized that we had something truly groundbreaking to offer to the world. As a result, we transformed it into a Liquidity Protocol based Token. This unique token operates by speculating solely on the basis of Book Value and Liquidity Spectromics. This means that GGO is not just a regular cryptocurrency; it possesses the strength and security comparable to that of a bank. With its decentralized nature and SHA-256 secured network, anyone can easily access and verify its transactions. Additionally, GGO provides the ability to view and assess anyone's Net Worth. This level of transparency and accessibility sets GGO apart from other cryptocurrencies in the market.

Developmental Spectromics

Interoperability

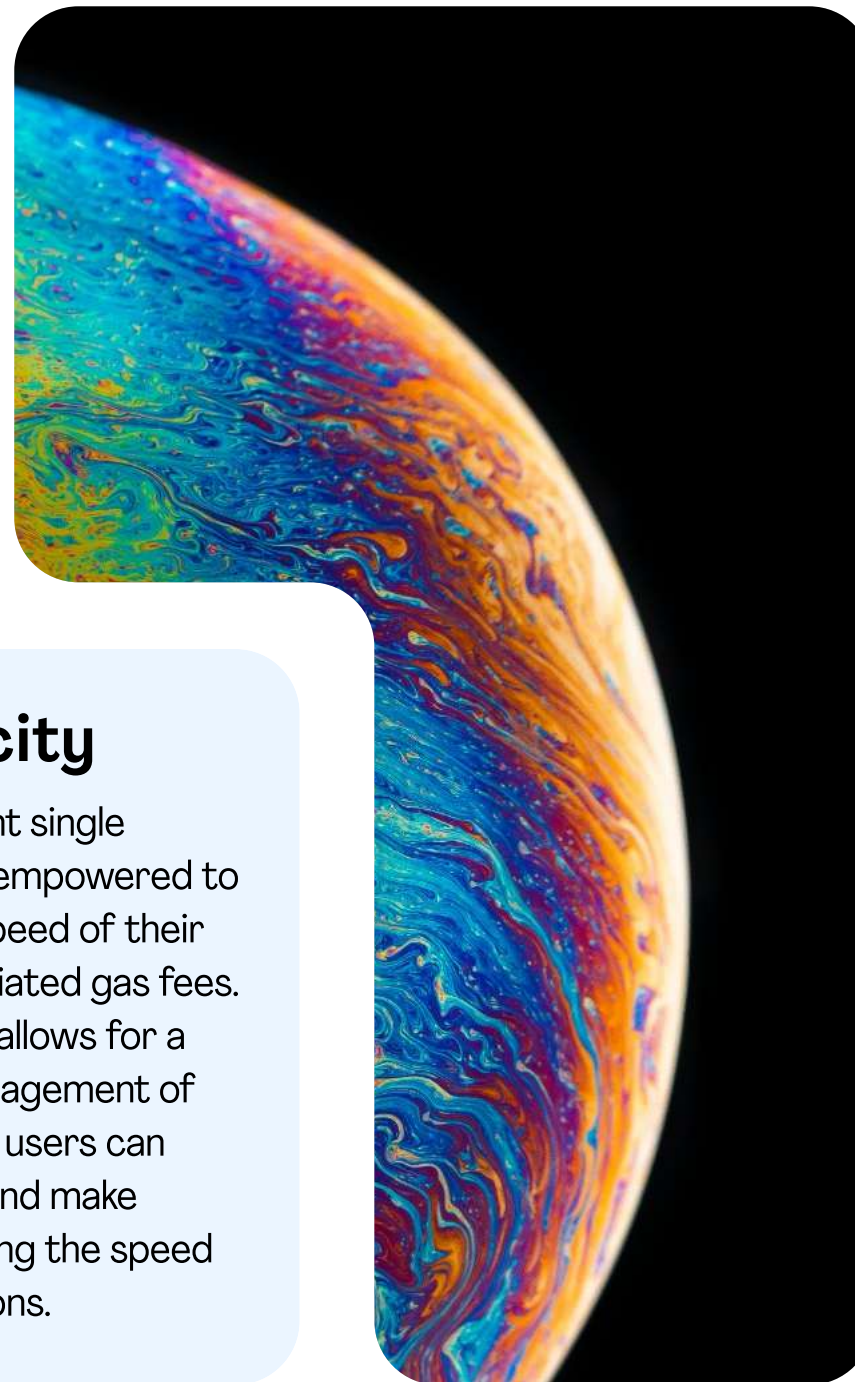

GGO provides a wide range of features that promote seamless interoperability. With the inclusion of Cross-Swap, Cross-Switch, and Cross-Chain Transactions, users can easily transact using any blockchain or altcoins without worrying about additional fees for cross-benefits. This innovative approach ensures that GGO users have the freedom to engage with different cryptocurrencies and blockchain networks, expanding their options and enhancing their overall experience.

Execution Velocity

With the use of a convenient single window system, users are empowered to have full control over the speed of their transactions and the associated gas fees. This streamlined approach allows for a seamless and efficient management of transactions, ensuring that users can optimize their experience and make informed decisions regarding the speed and cost of their transactions.

Execution Velocity

With the use of a convenient single window system, users are empowered to have full control over the speed of their transactions and the associated gas fees. This streamlined approach allows for a seamless and efficient management of transactions, ensuring that users can optimize their experience and make informed decisions regarding the speed and cost of their transactions.

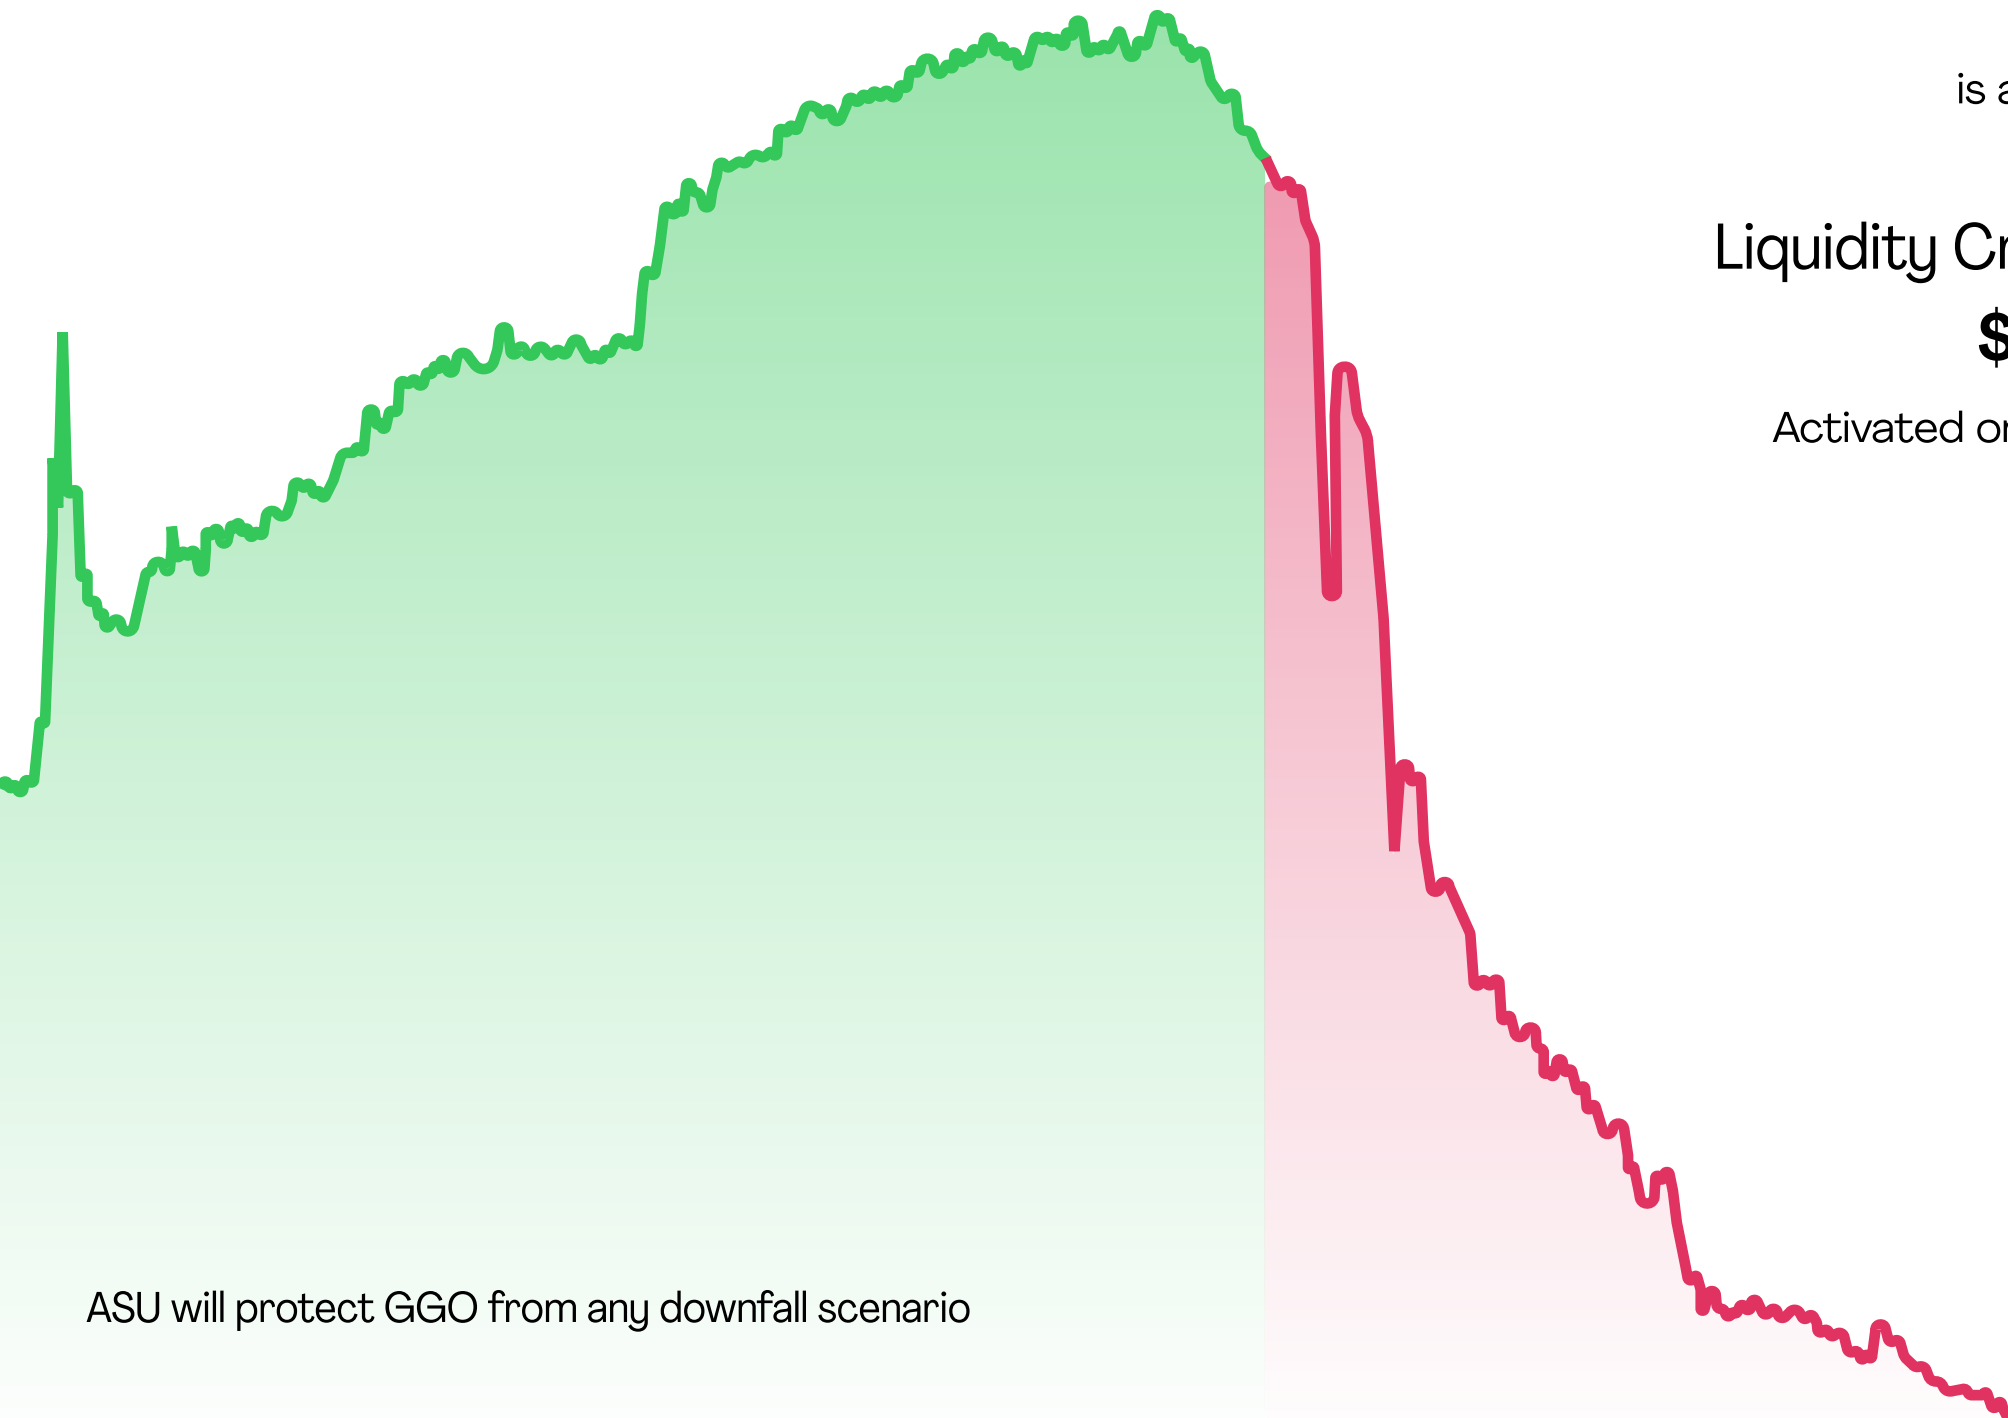

Governance to Users

With the assistance of governance, users and holders of GGO have complete control over the platform. This control is facilitated through the implementation of various advanced methodologies and tools, such as the AI-based Investor Behaviour Reference, SWOT Methods, and Furgence Trial Method. These innovative tools empower users to effectively manage their investments and make well-informed decisions by providing them with valuable insights and analysis. The integration of governance and these advanced methodologies ensures that users have the necessary resources and support to navigate the complex world of investment with confidence and achieve greater success. Additionally, the platform is equipped with automated failsafe and transaction switches, providing an added layer of security and peace of mind for users.

ASU Protect by GGO

Protection against price fluctuations

ASU will protect GGO from any downfall scenario

Stability Maintenance

Activated only during a crisis.

Asset Security for Users

30% of Capital Value

Activated only during a crisis.

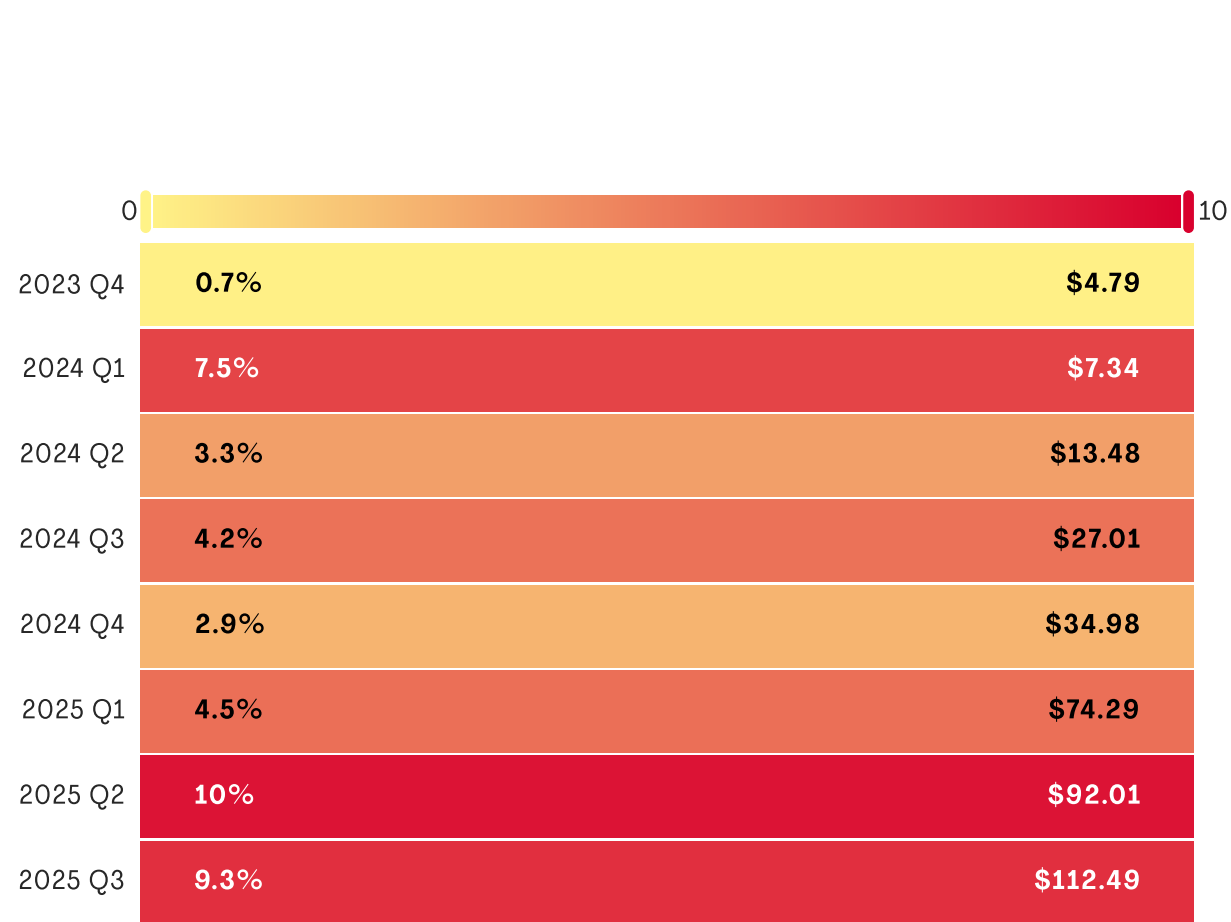

LP Validator Lock-In

365 Day to 1,095 Days

Is activated at initial times.

ASU, which stands for Asset Security for Users, is an innovative solution that addresses two important concerns. The first one is the establishment of a lock-in fund pool, amounting to 30% of any trade or buy-in that takes place on the platform. This ensures that there is a sufficient reserve to safeguard the interests of users. The second key aspect of ASU is the protection it provides against the downfall of the GGO Price. In the event that the Liquidity Pool falls below 5% of the Total Liquidity Pool/Book Value, trading is automatically halted, preventing any potential losses for users. By implementing ASU, users can have peace of mind knowing that their assets are secure and protected at all times.

Burning, which is the process of permanently removing a certain amount of tokens from circulation, plays a crucial role in stabilizing the price of GGO. By reducing the supply of tokens, burning helps to create scarcity and increase demand, which in turn can lead to a more stable and potentially profitable market for investors. This strategy not only benefits existing investors but also creates new opportunities and positions for upcoming or new investors who may be attracted to the potential profitability of the market. Therefore, burning is an important mechanism employed by GGO to manage and regulate its token economy, ensuring a sustainable and attractive investment environment for all stakeholders.

Know more about Staking Bridges

The main development of GGO is Staking Bridges, which allows users to earn money with their unused funds.

Staking Bridges is not just a get-rich-quick scheme; it is a revolutionary technology that allows for seamless transitions between validators in order to obtain the best interest rates. This groundbreaking technology enables users to benefit from real-time charging per second from exchanges, decentralized websites, instant liquidity, and leverage pools. With Staking Bridges, users can maximize their earnings and take advantage of a wide range of financial opportunities.

The research on Staking Bridges was initiated in 2019 with significant instability. However, over time, we have made remarkable progress and have successfully developed and implemented more than 500 Staking Bridges.

These bridges operate tirelessly, working around the clock, to ensure our users are consistently rewarded for their participation. Our commitment to continuous improvement drives us to constantly enhance the performance and reliability of our Staking Bridges, providing our users with a seamless and rewarding experience.

Staking Bridges are designed to provide stability and fulfill the requested rewards ratio. While they are generally reliable, there may be instances where the intended target is missed. In such cases, the Staking Bridges have mechanisms in place to compensate on another day. This ensures that users still receive the rewards they are entitled to, even if there are occasional deviations from the expected outcome. Staking Bridges prioritize maintaining stability and strive to deliver consistent results over time.

GGO acts as an intermediary that takes advantage of the differences in funds, prices, and fluctuations and ensuring the stability of the GGO price is the fundamental capability that we must fulfill. We employ various strategies and mechanisms to effectively manage the arbitrage that arise from these factors. By carefully monitoring the market conditions, analyzing the trends, and leveraging our expertise, we are able to navigate through the complex landscape of financial dynamics and maintain the equilibrium of the GGO price. This not only instills confidence in our investors and stakeholders, but also strengthens our position as a reliable and trusted entity in the market.

Quick FAQs

Is there any guarantee of funds?

GGO stores the liquidity in your wallet and not in our liquidity pool. This means that you have complete control over your funds and can access them at any time. The responsibility for the amount of funds stored in your wallet is securely stored in decentralised wallets such as Trust Wallet or MetaMask, which are connected to your GGO Crypto account. This ensures that your funds are safe and protected, while also providing you with the flexibility to manage and utilize them as you see fit.

Can I cancel my contract anytime?

You can cancel your contract anytime with valid reasons. Check our pre-closure terms for [more information](#).

How can I check my Liquidity?

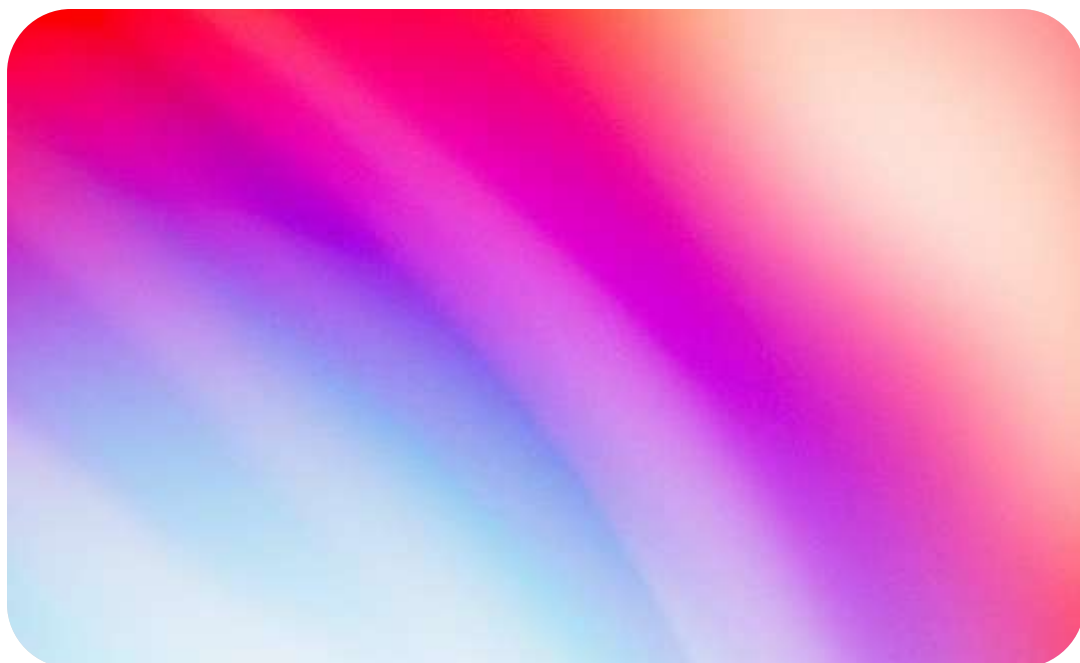

You can check your account's liquidity and access your funds at any time from our user-friendly [Website](#).

How can I make an order?

You have the flexibility to transfer any Asset, whether it's Crypto or Fiat currency, from your Local Country, using our Website. Our platform is seamlessly connected to CryptoDukaan, ensuring that your profit or liquidity is delivered directly to you. We support 100+ Fiat Currencies and 400+ Cryptocurrencies as acceptance of Payment, and our orders can be executed from any part of the world, with instant AML and Generative-KYC technologies.

Are staking bridges stable?

Staking Bridges rely on a highly advanced and robust system of 153 Sentry Bots to ensure the seamless operation and top-notch security of the platform. These bots play a crucial role in the ecosystem by constantly monitoring and regulating various aspects such as liquidity, pricing, interest rates, profits, losses, movement tracking, drive maintenance, and block validation. It's sophisticated algorithms, they are capable of adapting to ever-changing market conditions, thus contributing significantly to overall stability and efficiency of Staking Bridges system. It is their unwavering commitment to continuous monitoring and optimisation that truly fuels the success and growth of the entire Staking Bridges platform.
