

Patented Science

The GlycoCheck Technology and the Endocalyx Pro Nutraceutical have been thoroughly researched and tested. Research has proven that damaged glycocalyx leads to hypertension, kidney failure, obesity, and more. Research has also proven that Endocalyx Pro grows back the endothelial glycocalyx.

GlycoCheck Patent

Endocalyx Pro Patent

Glycocalyx Research

FDA Registered Class 1 Medical Device
Top diseases studied in **180 hospitals and universities globally.**

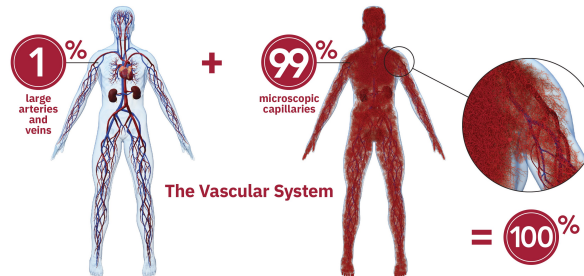

For complete list of conditions researched with GlycoCheck, visit GlycoCheck.com

Are YOU at Risk?

Early warnings signs of declining health

Fatigue, cold hands and feet, Hair thinning, memory loss, lack of focus, diabetes, high blood pressure, neuropathy, and slow wound healing.

Microvascular dysfunction leads to organ starvation.

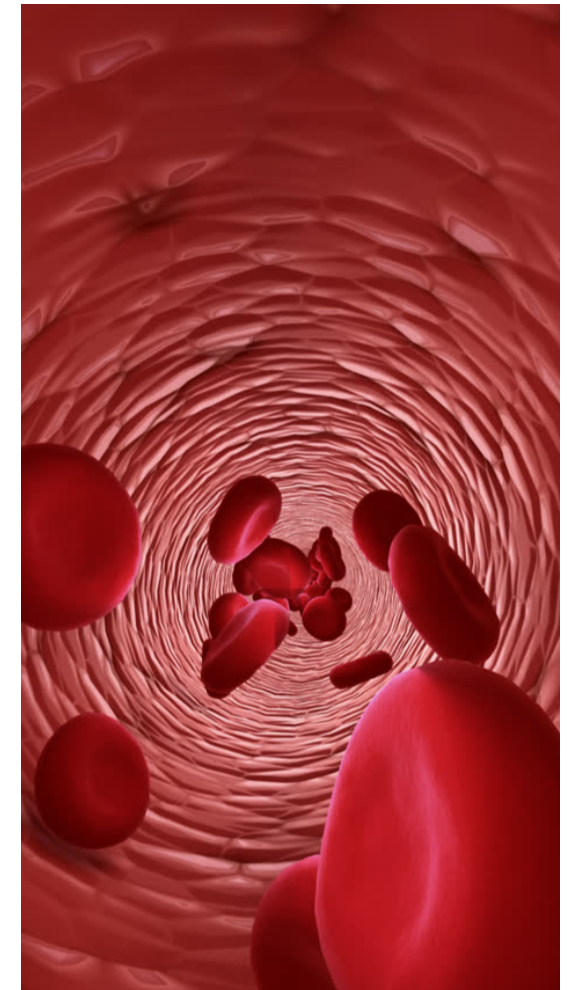

What causes damage in the Glycocalyx?

Aging, lack of exercise, lack of sleep, poor diet choices, smoking and other lifestyle choices.

Discover GlycoCheck and Endocalyx Pro

The Greatest Advancement in Medicine in Over 100 Years!

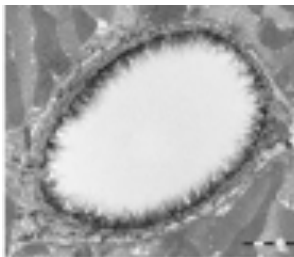

Why GlycoCheck?

For many years, the medical field has only analyzed part the Vascular System: the arteries, veins, and heart. However, those large vessels make up only 1% of the surface area of all your vessels. The Microvascular System makes up the other 99%. Until now, the medical field didn't put their attention towards these micro vessels because they are 100-200x smaller than a single strand of hair, making them impossible to operate on. The GlycoCheck allows us to take a look at the function of your microvascular system before it's too late. Paired with Endocalyx Pro to help rebuild and protect those vessels is the **ultimate combination for a long, healthy life.**

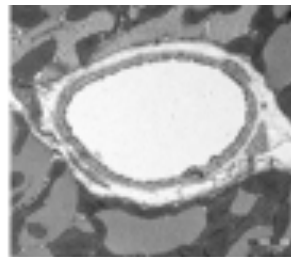

What is Glycocalyx?

The glycocalyx is the most important part of the cardiovascular system. The glycocalyx consists of small, dense hairs filled with a thick gel. This is the protective coating on the entire surface area of every single blood vessel in your body. Along with cell wall protection, the endothelial glycocalyx transfers nutrients from the blood to the tissues and also releases nitric oxide causing vasomotion, which gets the blood moving through the capillaries.

Healthy

Damaged

What happens when damage occurs?

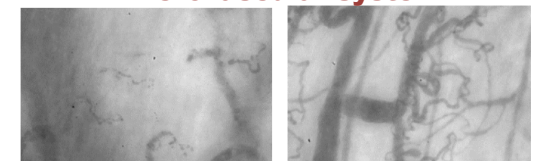

When damage happens to the endothelial glycocalyx, it leaves the single-cell thick vessel wall exposed, causing calcification and plaque. In addition to blockages in the vessels, damaged glycocalyx leads to tissue starvation and disease.

How does Endocalyx Pro work?

Endocalyx Pro was created by studying the blue zones of the world. They discovered people living in those Blue Zones consumed common plant-based ingredients that enabled them to live over 100 years old. Endocalyx Pro consists of a high concentration of the key ingredients in these plants to promote an accelerated growth of the endothelial glycocalyx, not achievable through diet alone. Within 24 hours of taking a single dose of Endocalyx Pro, new glycocalyx hair growth is occurring in the vessels. When new growth happens, capillaries turn back on and oxygen is able to get back into the densest tissues including the pancreas, heart and kidneys. Along with overall blood flow increasing, the drains open and toxins are able to be pulled out of the body leading to an overall increase in health.

Endocalyx is proven to restore, regenerate, and protect the microvascular system.

Unhealthy Microcirculation
Before taking Endocalyx™
Low Microvascular Health Score 0.6

Healthy Microcirculation
Month 4 after taking Endocalyx™
High Microvascular Health Score 3.9
