

# The Future of Research Evaluation

## Issues

Singular focus on (biblio)metrics **is a risk:**

Because this divests research evaluation of other forms of research value, for example:

Aren't there **already** efforts to reform?

Yes, but they are **localized and piecemeal...**

... Risking many research communities **falling behind** and being **excluded** from global research

**Recent developments** are changing the research world:

## Actions

### Global

The **Declaration on Research Assessment** endeavours to serve all: individuals and institutions

### Regional

Latin America's **CLACSO-FOLEC** Declaration of Principles for Research Assessment

EU's **CoARRA** Coalition on Reforming Research Assessment

### National

Some countries are building **institutional consortia**, targeting **specific sectors**, tackling **perverse incentives** and **behaviors**.

### Sectoral

Specific communities of practice, for example:

### Technological interventions

## Challenges

Multiple challenges/questions, for example:

#1

Will the introduction of more qualitative indicators be **widely adopted**?

#2

How will **AI tools for research evaluation** impact the current inequity in science systems worldwide?

#3

How will the **use of chat bots** to increase quantitative outputs impact the publishing industry?

Processing...

#4

Is the **weakness of concerted reform** efforts globally leading to further fragmentation?

#5

Can reforms ultimately enable a research ecosystem that thrives on **high-quality, ethical, inclusive, diverse** and **impactful** research?
