**FOCUSED ATTENTION
LIMITLESS POTENTIAL**

anjuna

Confidential Computing Platform – Easily transform your hybrid cloud into a high-trust environment where data is always encrypted, and code is verified for authenticity. Anjuna virtualises modern CPUs and cloud infrastructure services to offer hardware-enforced isolation that protects from unauthorised access by users or software, regardless of privilege level. Run your workloads with complete data privacy with no code changes, always-on encryption, and policy-based verification.

AVIGILON™ ALTA

Formerly AVA

Cloud-native video surveillance with intelligent analytics. A complete, end-to-end cloud-based security solution that future-proofs your video security and access control with innovative capabilities and intelligent analytics. The power of AI in a camera; true edge computing.

The biggest cyber threat is defending alone. IronNet's Collective Defense platform is a military-grade network detection and response (NDR) platform developed by ex-military analysts. Combining the power of collected, validated real-time crowd-sourced attack intelligence, through enhanced analytics and AI. IronRadar threat feed uses unique fingerprinting to proactively track the creation of new malicious infrastructure and blocks adversaries before these C2 servers are weaponised.

OTORIO is a provider of OT Cyber Security solutions for industrial control systems and cyber-physical systems. Delivering a Cyber Risk Management Platform designed to support every stage of the maturity journey, from unmatched visibility to tailored risk management. OTORIO's platform enables organizations to make informed decisions that boost security ROI and meet KPIs to keep your environment safe and secure.

The platform leverages operational context for risk analysis, generating insights that empower Operational Security teams. With prescriptive mitigation playbooks and expert-defined remediation guidance, continuous monitoring and automated reporting, OTORIO's platform ensures resilient, compliant business operations and robust supply chain governance. The platform uses best practices so you can harden security configurations and network interfaces, delivering immediate business value across your organization.

Protect everything you operate with Otorio.

Privacy

NOW Privacy is a data discovery, management, and workflow tool that accelerates data governance, efficiency, and management of an entire organization's data set.

NOW Privacy is a data connector capable of creating a searchable index across multiple databases with unstructured and structured data. Database connectors include (but are not limited to) SharePoint, Microsoft Teams, and AWS. NOW Privacy works with 950+ data types, classified using a bulk action. An index of data is created for analysts to rapidly search the data and accurately identify redundant and sensitive data types across data silos. Organizations can proactively secure and limit file access by identifying sensitive data, and redundant data can be removed to reduce storage costs. NOW Privacy does not require that data be copied to a unified storage location.

The number 1 converged Identity Platform that enables enterprise modernisation by safeguarding identities and guaranteeing trust with just-in-time provisioning, significantly reducing the attack surface. Saviynt's industry-leading cloud solutions govern every Identity with precision in a hybrid multi-cloud world – solving the toughest security and compliance requirements in record time. Deploy identity governance, granular application access, and privileged access in a single cohesive platform.

SERAPHIC
SECURITY

Seraphic is redefining enterprise browser security with unmatched protection against 0- and N-day exploits and phishing, a simple, fast deployment, and preserving the native browser experience. With browser vulnerabilities on the rise and more users working remotely, hackers have turned the browser into the most serious threat to business. Seraphic turns any browser into a secure enterprise browser so users can work the way they want to, and security has all the tools they need to keep the business safe.

The Secure Digital Workspace for virtual desktop and virtual application access. The only all-in-one enterprise-level solution for safely onboarding global staff, managing secure access to sensitive data, and delivering work immediately. Simplify the delivery and management of your hybrid and remote work with a secure, ready-to-deploy, all-in-one cloud-native platform that easily scales up or down as business needs and requirements evolve. Tehama easily integrates into your existing tech ecosystems, enabling organisations to eliminate operational overhead, idle tech capacity, and reduce costs.

Fortify your cyber hygiene with 360 attack surface visibility. Skybox creates a digital twin in a multidimensional model and visualises all security controls and network configurations across hybrid networks. Solving the problem of continuously and proactively managing exposure and helping organisations with the most complex challenges to automate cyber hygiene and compliance tasks. Skybox gives organisations unparalleled visibility into their dynamic environment to automate firewall and network assurance tasks and take command of risk-aware vulnerability and threat management.

Addressing vulnerabilities is only part of the problem. There's a world of other exposures, that when combined, create attack paths to your most critical assets. Most exposure management solutions fail to help organisations move beyond silos to create scalable and sustainable exposure management programs. With XM Cyber, you can understand security posture like never before and communicate it to the board, IT, and security teams. See the attacker's perspective with holistic attack path modelling of your cloud and on-prem exposures, for continuous identification, remediation, monitoring, and validation.
