

FOR IMMEDIATE RELEASE

Coast & Cottage™ Introduces The HAIL™ AI Standard — The Human-Augmented Intelligence Language™

A publishing innovation by PixelFix Films LLC · U.S. Patent Pending

Palm Beach County, FL — October 2025

Coast & Cottage™, the design-forward lifestyle publisher known for its lyrical approach to place and story, today announced the release of **The HAIL™ AI Standard — The Human-Augmented Intelligence Language™**. Developed by PixelFix Films LLC, the HAIL™ framework defines how artificial intelligence produces consistent, verifiable, and human-readable text.

The HAIL™ AI Standard establishes a repeatable structure for language generation, ensuring that every piece of AI-authored content retains meaning, attribution, and contextual integrity. It provides a blueprint for systems that value traceability, precision, and design alignment between machine output and human expression.

The standard addresses one of the most persistent challenges in artificial intelligence — the inconsistency of generated text. Traditional code-based methods can't impose discipline on language output, but HAIL™ introduces a framework that does, combining refined formatting with improved linking protocols that bring reliability to generative writing.

“AI output is inherently undisciplined,” said Harold Blake Smith, co-founder of PixelFix Films. “You can’t fix that with more code — you need a language. HAIL™ introduces structure where there was none, setting new standards for how AI text is formatted, linked, and output in a non-controlled environment. It’s not about controlling AI output — it’s about guiding it properly to simply look and behave better. And we call this ‘Diamond Walking.’”

The specification introduces a layered approach to AI publishing, separating semantic understanding from presentation and delivery. This allows systems to interpret, render, and verify generated language in a controlled and auditable format — without reliance on unstable or proprietary databases.

Already adopted within **Coast & Cottage ♦ Concierge™** and select partner implementations, HAIL™ supports structured entity referencing, editorial-grade output, and deterministic

formatting. It provides the foundation for compliant AI communication — language that performs predictably, displays elegantly, and scales safely across platforms.

About The HAIL™ AI Standard

The HAIL™ AI Standard — The Human-Augmented Intelligence Language™ — is a markup and specification framework defining how generative systems encode, exchange, and render structured language. It enables interoperability, accuracy, and traceable authorship across AI-driven platforms while preserving readability and design integrity.

About PixelFix Films LLC

PixelFix Films LLC is a creative technology studio specializing in AI publishing architectures, standards development, and human-interface design. Founded in 2023, the company builds frameworks that merge editorial precision with computational scalability for media, design, and technology applications.

About Coast & Cottage™

Coast & Cottage™ is a digital publishing platform and early adopter of HAIL™, demonstrating how structured AI language can deliver readable, accurate, and aesthetically aligned editorial experiences for both lifestyle and informational content.
