You’re invited to join the Limb Loss & Preservation Registry (LLPR)

Join the registry TODAY and impact POLICY and ADVOCACY of the FUTURE

Participating in clinical registries allows smaller practices to effectively leverage larger volumes of data and inform policy changes necessary for improved patient care.

Health Disparities
- Are there systemic biases in prosthetic prescriptions or access to care based on non-medical reasons?
- How can these be avoided in amputee health policies?
- Does geographic distribution of clinics in underserved areas impact access to care?
- Should capitated care models be regulated to ensure patients get equal access to providers compared to fee-for-service models?
- Should health programs and payers use review mechanisms, or should they be regulated to ensure better access to care?
- Do managed care plans have lower rates of advanced prosthetic technology prescriptions?

Patient Demographics
More robust data e.g. incidence and/or prevalence of amputations and limb preservation procedures throughout the US.

Planning
- What are meaningful outcomes?
- How can service delivery be enhanced?
- What are strategies that promote better healthcare?
- Define focus areas for funding initiatives.

The LLPR is the first national database of its kind which collects limb loss and limb preservation patient data and performs insightful analyses.
Add your facility’s name to the growing list of providers that have already joined the LLPR:

American Prosthetic Institute, Ltd.
Arise Orthotics & Prosthetics
Bionic P&O Group
Clark & Associates Orthotics & Prosthetics Inc.
Dynamic by DESIGN
Horton’s Orthotics & Prosthetics
Kenney Orthopedics Prosthetics & Orthotics
Mayo Clinic
Nevada Orthotics & Prosthetics Inc.
Orthocare Innovations LLC
Prosthetic Center of Excellence
Quantum Prosthetics & Orthotics
UAB Medicine
UHealth Hospital System
Union Orthotics & Prosthetics Inc.
University of Michigan Health
UTHealth Houston System
Victory Orthotics & Prosthetics

The LLPR is the first national quality database designed and built to generate knowledge about which O&P advances and treatments produce the best outcomes for individuals with limb loss, limb difference, and limb preservation. The LLPR collects and standardizes data from hospitals, providers, and patients over time. This data is used to improve prevention, treatment, and rehabilitation approaches for this population.

Join the growing list of O&P providers and hospital systems contributing data to help demonstrate the quality and impact of the care practitioners provide.

Using the data from the LLPR, practitioners, clinical leaders, and operators can:

- Evaluate treatment options and care plans to improve and maximize patient function
- Set meaningful, realistic, and consistent goals and objectives with patients and the care team
- Critically assess the care provided compared to regional and national benchmarks
- Use patient population and social disparities to risk-adjust outcomes

Connecting is easy, secure, cost effective, and sustainable for ALL practice sizes

The registry has partnered with OPIE, Nymbl, COMET, and OPSolutions to make exporting data convenient. The LLPR is designated a Federal Risk and Authorization Management Program (FedRAMP) Moderate Impact Level secure database. Providers push their data to the registry—the LLPR does NOT and cannot access a provider’s electronic medical records system. Currently, there is no cost to join, send data, and receive basic dashboard reports from the registry. Beginning in 2024, subscription plans offering varying levels of benchmarking, progress, and performance will be available for purchase.
