Counter Selection Guide

# Introduction to Carbon Smart Wood™

## **What is Carbon Smart Wood?**

Carbon Smart Wood™ is material that is salvaged from tree removals usually due to Disease, Disaster, Decay, or Development. The Fallen Lumber Co is a proud distributor of Carbon Smart Wood™ and works with local arborists and tree service companies to turn this would be wasted material into beautiful furnishings, giving these trees a second life.

## **How is it different than traditional wood?**

Because our material is salvaged, we cannot control its look and appearance to the same degree. Most wood from traditional sources is grown and graded for uniformity and consistency. Our material has character. The knots, figure, burls, and grain patterns all tell a story of the people and place where it grew.

# Butcher Block Countertops

# Step 4: Edges

Standard

Medium Eased

Heavy Eased

\*\*\*Edge selection applies to all square-cut edges and corners. Natural “Live” Edges will be treated in a manner that preserves the natural edge while providing the best tactile experience\*\*\*

# Step 5: Select Finish

All of our objects are finished using OSMO Satin, a medium-low sheen hard wax oil. Over the years, we have found this product best accentuates the natural color and grain structure of our woods. We also offer standard OSMO Stains if you wish to alter the color in any way.

## **Natural Finish**

- Clear Satin

## **Stain**

- Cognac
- Walnut
- Oak Antique
- Ebony
