

TREEBUD

At Tree Bud we offer an alternative to conventional tree guards. Rather than being plastic or over engineered, we have a simple solution to a growing problem. A fully biodegradable tree guard made from plants, to protect plants.

Our unique biodegradable coating ensures the guards last the duration of the saplings' establishing period. After 4 years the guard breaks down, leaving no mess but also giving the nutrients through composting.

Carbon Credits

What Are Carbon Credits?

Carbon credits, also known as carbon offsets, are permits that allow the user to emit a certain level of carbon dioxide or other greenhouse gases. One credit permits the emission of one ton of carbon dioxide or the equivalent in other greenhouse gases.

Tree planting is a popular way to offset your produced carbon, and with TreeBud you can expect 2X the efficiency because our raw material is carbon positive. In other words our raw material is absorbing twice as much Co2 compared to similar products on the market today.

TREEBUD

“ We aim to provide honest, competitive products that will have a significant positive impact on the environment.”

INSTALL PROCESS

The majority of tree guards are bulky and in turn have high delivery costs. At Tree Bud all our guards are flat packed giving the customer the best transport price, but also moving the products in the most efficient way possible.

To install the guards is simple;

1. Plant the sapling
2. Fold the guard into shape and fasten using the supplied tabs
3. Push a bamboo cane through the tabs described on the previous step
4. Thats it! You now have an installed TreeBud guard.

In the UK alone we need to plant 35 million trees by 2025. It is estimated we would need a trillion trees to absorb 2/3 of human made emissions, this would then slow down climate change.

The Creator

George Bourne studied product design and has spent his life in the horticultural field.

Raised in an environment of agriculture and landscape design, George's innovation coupled with his passion to preserve the environment led to the creation of Tree Bud, the UK's most sustainable tree guard.

George's mission is to create awareness of the importance of planting trees, in the most sustainable way that protects and nurtures the environment now and for generations to come.

THE PRODUCT

TreeBud 60cm guard

- Designed to last for the plant's establishing period
- 100% biodegradable
- Flat packed for maximum efficiency
- Ventilation and light ducts for ideal growing conditions
- Made from waste plant material

The change starts now
