

# AKARUN

A mobile-first game where players race with runners whose speed is driven by the real-time market performance of their associated asset

## Make Your Choice

Every player picks an asset brought to life as a unique character in the game

**WINNER TAKES IT ALL**

96% of the prize pool is up for grabs! The player who picks the best-performing asset in the 30-second run wins it all

PLAY NOW

**250k+**

Players with tournaments

Akarun tournaments let MEME communities compete in epic matches and tournaments, leveling up player gamification.

**95+** Playable Assets

- + Crypto & Stocks
- + Commodities & ETFs
- + Cross-category runs

## 1. Introducing Akarun

### How it works

Players wager 100 AKA to 1M AKA, choose an asset, and compete against others. Each asset is shown by a character in a 30-second run, with speed driven by real-time market performance.

### What Players Win

The top-performing asset wins 96% of the prize pool, with returns from x2 to x100. Compete in duels with up to 100 players.

### What \$AKA and NFT Holders Get

4% of every single run is redistributed to AKA governance token holders and the NFT owners involved in the game.

## 2. Key Points

### No Web3 barriers

Massive adoption thanks to the ability to play even on mobile, no Web3 knowledge needed.

### MEME showdown

The perfect tool for MEME and mainstream token communities to engage in fun tournaments.

### Market Fusion

Integrate NFTs, commodities, stocks, and bonds with crypto for cross-market competitions.

### AKA Token

Purchasable via Web3 or IAP it's essential for selecting any asset in-game, be it crypto or Nasdaq.

### Dashboard Power

Users can top-up, withdraw, stake, farm, burn, and bridge across 6 different chains.

### Passive Earnings

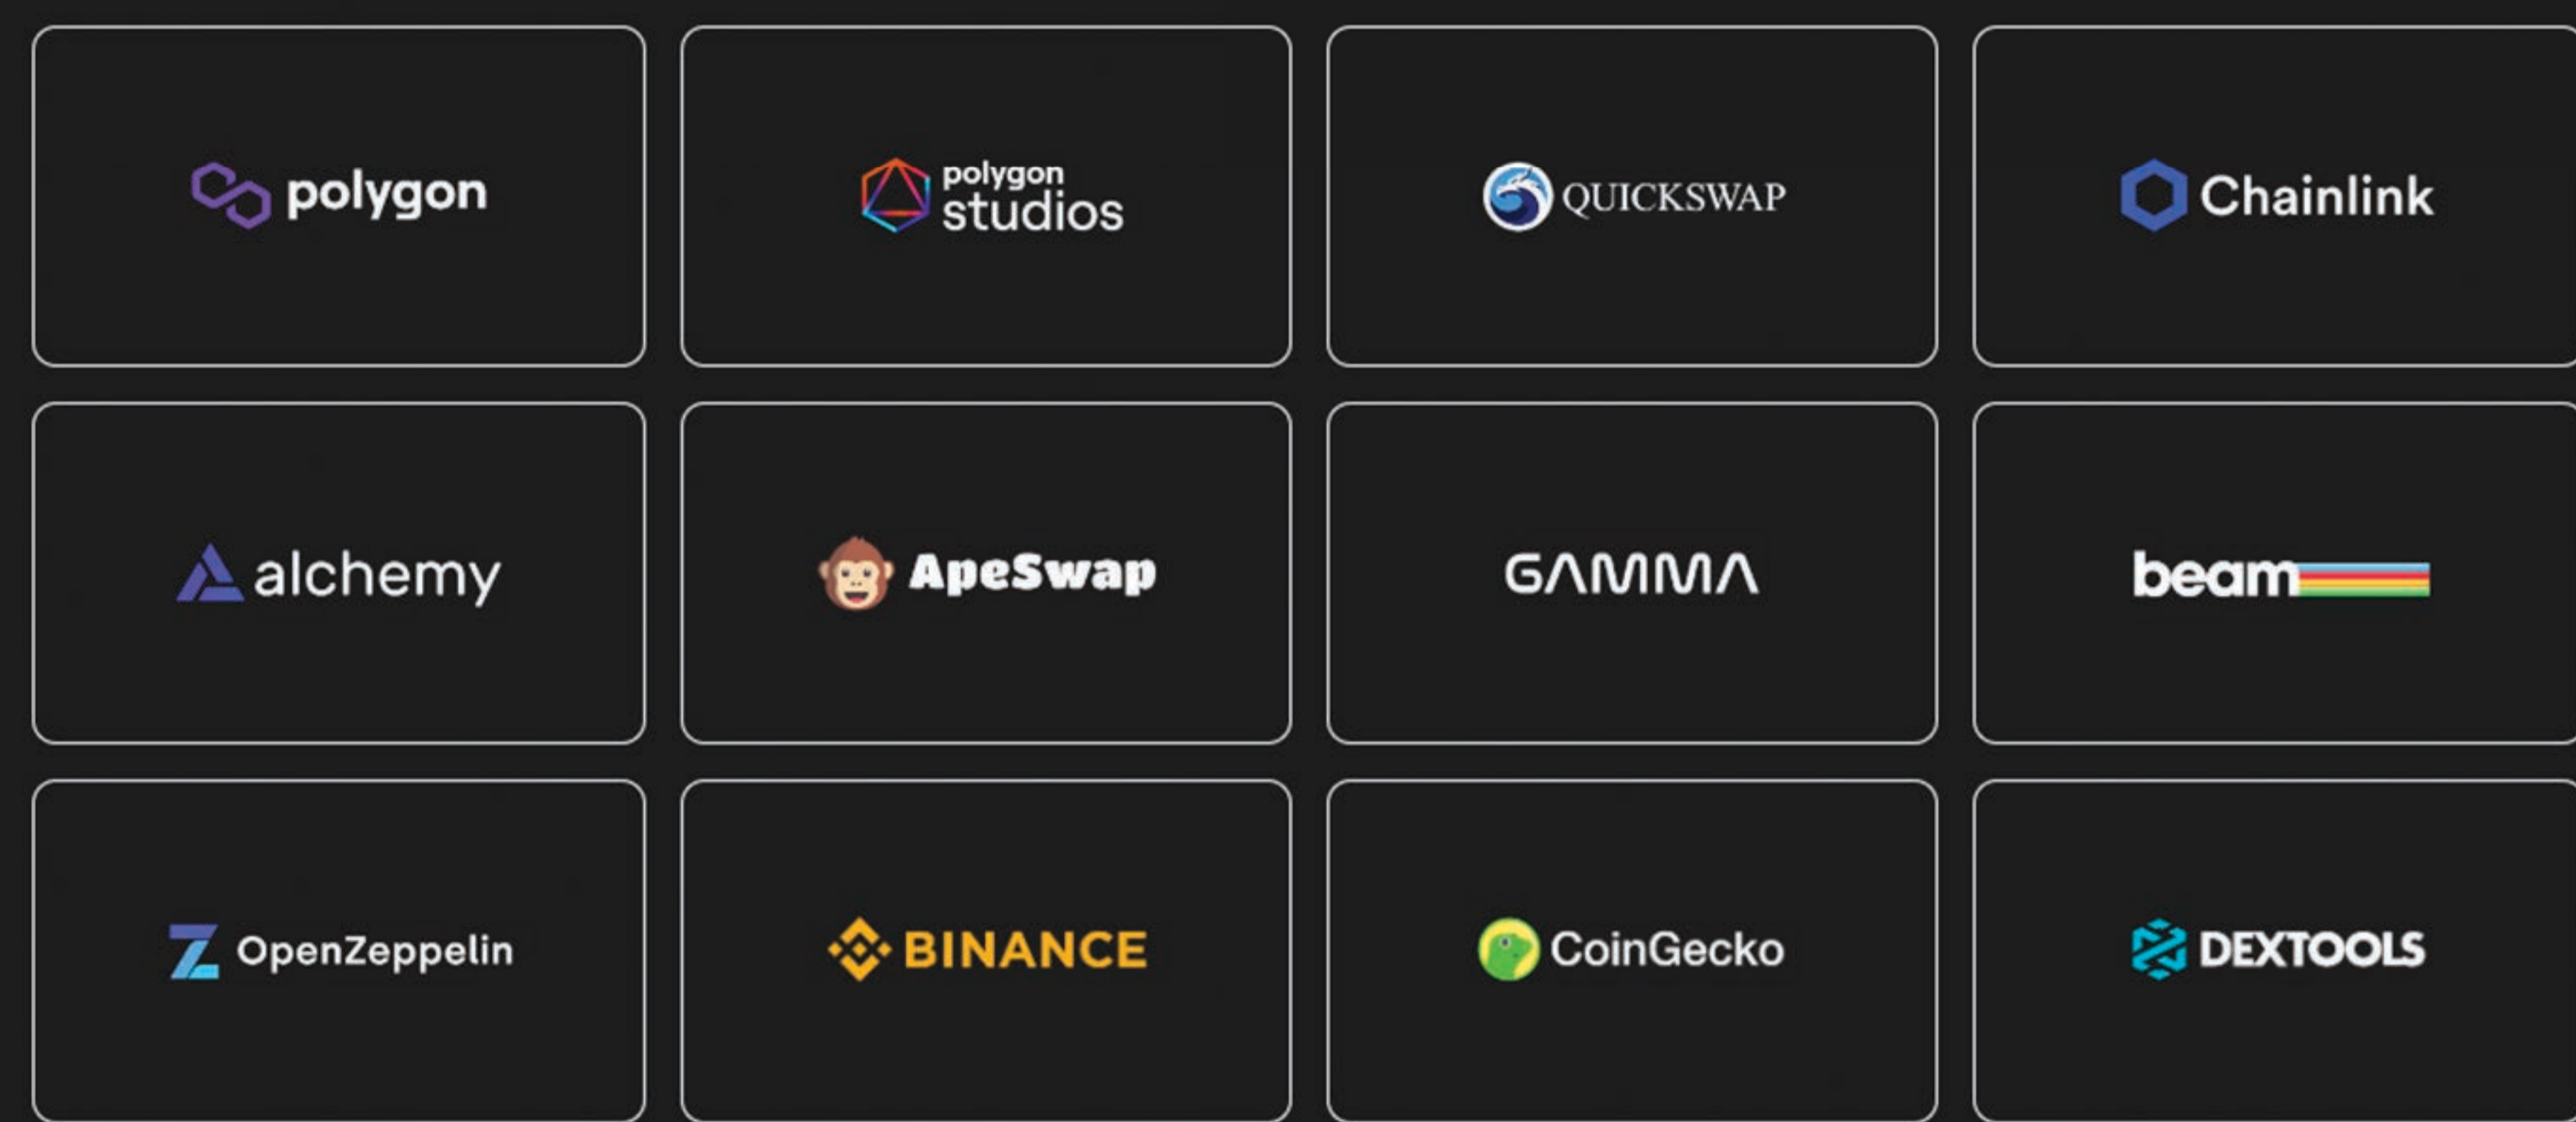

No NFTs needed to play; but as a holder, earn up to 4% by owning NFTs or staking AKA tokens.

## 3. Partners & Oracles

**12k+**

### Pre-launch players

Akarun's pre-launch "Play and Farm" promo let early players farm AKA from wins and referrals, sparking massive engagement across X, Telegram, and beyond.

## 4. Token Sale & Valuation

■ Ticker	→	AKA
■ Total Supply	→	20,000,000,000
■ Network	→	ERC20 (Native) - Polygon (Child)
■ Public Valuation	→	\$8.8M
■ Initial Market Cap	→	\$168,520
■ Private	→	12.8% PPT \$0.00030 / Raise \$768K TGE 5%
■ KOLs	→	3.5% PPT \$0.00033 / Raise \$231K TGE 5%
■ Public	→	11% PPT \$0.00044 / Raise \$968K TGE 10%

### 01. What is the key advantage of AKA's initial pricing?

AKA's entry at \$0.00030 in the private phase offers a strategic value with high potential.

### 02. What are the benefits of early access to AKA?

Early access in the private phase allows acquisition before public, capturing initial growth.

### 03. Why is the initial market capitalization significant?

The low market cap of \$168,250 indicates a significant growth opportunity for AKA investors.

### 04. How is token distribution managed at the TGE?

At TGE, only 5% of tokens are released, ensuring a controlled and stable market entry.

### Akarun.io - All-in-One Website

The thrilling mobile running game where market moves mean everything! Each race, one winner - always! 🏆
