

What to do if you find a tired bee

a small zine by
@pdxdinorama

Very gently move the
bee to a safe spot.
Preferably in the
sunshine, on a flower,
and nearby

1

A leaf can make a
good transportation
device.

Be gentle and keep
away from the bee's
stinger.

2

Wait a bit to see if
the bee flies away
(30 minutes is
recommended)

3

If the bee doesn't fly
away, you can offer
a 1:1 ratio of sugar
water.

Do not force
the bee to
drink

Do NOT
offer honey

A bee's tongue is
called a proboscis

They just need a little!

4

Thank you for
caring for these tiny
and vital creatures!
